**Managing Product Innovation In The Process Industries: From Customer Understanding To Product Launch - Uncover The Intrinsic Nature Of Developing Non-assembled Products** Thomas Lager,2024-04-29 This book puts management of product innovation in a corporate strategic perspective and argues that a company's competitive position is strongly related to an underlying unique and continually renewed product innovation work process which drives innovation and delivery of new or improved products in the marketplace. The book will take the reader through a systematic examination of the necessary consecutive steps for companies successful development of non assembled products in the cluster of process industries. For readers in search of a seamless easy to use effective formal product innovation work process from customer understanding to product launch this book provides a guiding framework and hands on advice for work process design. A novel five phase structural process model of the product innovation work process is initially introduced in order to orchestrate a more dynamic interaction between product and process innovation and the integration of sustainability and product eco design in product design. The reader will learn first about the importance of aligning new product ideas with the corporate business model and product innovation strategy during the contextualization phase and then how to transform product ideas into well defined complementary product and process concepts. In the movement of product ideas from the conceptualization phase to industrialization the use of pilot planting and production trials for scale up of product and process concepts is further explored. To secure a design for processability a novel industrialization sub process is introduced and the integration of complementary development of product and service offerings is further examined. The deployment of application development throughout and after product launch is highlighted for an enhancement of product commercialization and a reduction of time to break even for new products.
