Mangrove Ecosystems Function And Management:

Mangrove Ecosystems Volker Linneweber, 2013-06-29 Protection of the environment has nowadays become a major challenge and a condition for survival of future human generations and life on Earth in general. Yet it is still far too much of a dream or hope rather than a reality in the policy of our societies. Presently we are experiencing an unprecedented exponential growth of demography combined with a race for profit resulting in excessive consumption particularly of energy and a serious impact on the world ecosystems. Various types of pollutants and emerging new diseases not only disrupt the normal course of life but also above this some of the atmospheric pollutants are most likely involved in the changing climate. We fear and literally shiver at the thought that the changing climate would ultimately disrupt the fragile thermodynamic equilibrium between the atmosphere and the oceans. Are we insensitive to these facts to the point of pushing our descendants some generations ahead into a new glacial period after a first period of warming up at least in northern Europe like the one that took place 13 to 14 millennia ago. Surely the planet's nature is not prepared to be dominated by man and will go its way whether humanity will be alive or dead.

Diversity and Function in Mangrove Ecosystems Richard Standiford, 2012-12-06 Mangroves are salt adapted plants that are found along many of the world's tropical and sub tropical coastlines. Regrettably these plants are being lost due to over exploitation, pollution, conversion to agriculture and aquaculture and other causes. This is having important consequences for local human populations that traditionally rely on this resource and is upsetting the fine balance needed to maintain this highly productive ecosystem. This text brings together some papers from two recent international symposia on the mangrove ecosystem. It provides an outline of future directions in mangrove research considered to be urgent by prominent mangrove scientists. Contributions include aspects of population differentiation in mangrove species that have been very little studied so far, ecological function and restoration and management of the mangrove ecosystem. This book is intended for scientists actively working in the areas of mangrove ecology and management.

Mangrove Ecosystem: Structure and Function V.P. Singh, K. Odaki, 2004-08-01 The book presents an account of mangrove forest ecosystem its structure and function. Mangroves are littoral plant formation found in tropical and sub tropical countries and occurs on the margins of oceans and estuaries. In this book all the aspects of mangrove forest have been discussed. The biodiversity, floristic composition and taxonomy have been enumerated very nicely. The loss of mangrove forest and its conservation and management aspects have been given in details. A case study of mangrove forests of Andaman islands and South Japan has been documented in details. This is a very good book for those who are working on mangrove ecology, taxonomy, physiology and coastal ecology.

Mangrove Ecosystems: A Global Biogeographic Perspective Victor H. Rivera-Monroy, Shing Yip Lee, Erik Kristensen, Robert R. Twilley, 2017-11-03 This book presents a comprehensive overview and analysis of mangrove ecological processes, structure and function at the local biogeographic and global scales.

and how these properties interact to provide key ecosystem services to society The analysis is based on an international collaborative effort that focuses on regions and countries holding the largest mangrove resources and encompasses the major biogeographic and socio economic settings of mangrove distribution Given the economic and ecological importance of mangrove wetlands at the global scale the chapters aim to integrate ecological and socio economic perspectives on mangrove function and management using a system level hierarchical analysis framework The book explores the nexus between mangrove ecology and the capacity for ecosystem services with an emphasis on thresholds multiple stressors and local conditions that determine this capacity The interdisciplinary approach and illustrative study cases included in the book will provide valuable resources in data information and knowledge about the current status of one of the most productive coastal ecosystem in the world

The Energetics of Mangrove Forests Daniel Alongi,2009-01-18 Despite their importance in sustaining livelihoods for many people living along some of the world's most populous coastlines tropical mangrove forests are disappearing at an alarming rate Occupying a crucial place between land and sea these tidal ecosystems provide a valuable ecological and economic resource as important nursery grounds and breeding sites for many organisms and as a renewable source of wood and traditional foods and medicines Perhaps most importantly they are accumulation sites for sediment contaminants carbon and nutrients and offer significant protection against coastal erosion This book presents a functional overview of mangrove forest ecosystems how they live and grow at the edge of tropical seas how they play a critical role along most of the world's tropical coasts and how their future might look in a world affected by climate change Such a process oriented approach is necessary in order to further understand the role of these dynamic forests in ecosystem function and as a first step towards developing adequate strategies for their conservation and sustainable use and management The book will provide a valuable resource for researchers in mangrove ecology as well as reference for resource managers

Environmental Geochemistry in Tropical and Subtropical Environments Luiz Drude de Lacerda,Ricardo Erthal Santelli,Egbert K. Duursma,Jorge Joao Abrao,2013-06-29 Three symposia on environmental geochemistry in tropical countries held in Niterói Brazil 1993 in Cartagena Colombia 1996 and in Nova Friburgo Brazil 1999 made it very clear that tropical geochemistry is of world standard and fast increasing in multi disciplinarily and impact on important geochemical paradigms It has additionally strong links with the economy of tropical countries such as mining and industrialisation and is in full development for treating environmental problems caused by human activities of urban or industrial origin We must compliment Prof Jorge Abrião and his colleagues in Brazil and Dr Gloria Prieto and her colleagues in Colombia for these initiatives The participation of respectively 180 and 150 scientists coming from 15 different countries for the first and second symposia has shown that a large interest exists for tropical environmental geochemistry It also demonstrates the necessity to understand tropical environmental problems The organisation of a large international symposium is not possible without the assistance of state and federal authorities for which those of Brazil and Colombia have

to be complimented The 3rd Symposium on Environmental Geochemistry in Tropical Countries was the last of the series and was attended by 22 countries and 170 participants and treated a number of related environmental and economic problems
