Orphans Of Chaos:

Titans of Chaos John C. Wright, 2007-04-17 If this is a Buffy the Vampire Slayer riff on Greek mythology it is nonetheless a highly erudite version a highly entertaining yarn SF Site Titans of Chaos completes John Wright's The Chronicles of Chaos Launched in Orphans of Chaos a Nebula Award nominee and a Locus Year's Best Novel and continued in Fugitives of Chaos the trilogy is about five orphans raised in a strict British boarding school who discovered that they are not human The students have been kidnapped robbed of their powers and raised in ignorance by super beings The five have made incredible discoveries about themselves Amelia is apparently a fourth dimensional being Victor is a synthetic man who can control the molecular arrangement of matter Vanity can find secret passageways through solid walls Colin is a psychic Quentin is a warlock Each power comes from a different paradigm or view of the universe They have learned to control their strange abilities and have escaped into our world now their true battle for survival begins The Chronicles of Chaos is situated in the literary territory of J K Rowling's Harry Potter books and Neil Gaiman's American Gods with some of the flash and dazzle of superhero comics Wright follows in the footsteps of Neil Gaiman and Tim Powers with his own distinctive style A highly enjoyable ride Publishers Weekly

Fugitives of Chaos John C. Wright, 2006-11-14 With its focus on Golden Age genre tropes and quirky teenage romance this fantasy adventure reads a bit like J K Rowling meets Roger Zelazny Publishers Weekly Wright's new fantasy which began with Orphans of Chaos and continues in Fugitives of Chaos is a tale about five orphans raised in a strict British boarding school who begin to discover that they may not be human beings The students at the school do not age while the world around them does The orphans have been kidnapped from their true parents robbed of their powers and raised in ignorance by super beings no more human than they are pagan gods or fairy queens Cyclopes sea monsters witches or things even stranger The five have made sinister discoveries about themselves Amelia is apparently a fourth dimensional being Victor is a synthetic man who can control the molecular arrangement of matter around him Vanity can find secret passageways through solid walls where none had previously been Colin is a psychic Quentin is a warlock Each power comes from a different paradigm or view of the inexplicable universe and they should not be able to co exist under the same laws of nature Why is it that they can The children must experiment with and learn to control their strange abilities in order to escape their captors Something very important must be at stake in their imprisonment Continuing the story begun in Orphans of Chaos Wright weaves an intricate tale of devious plots and counterplots spiced by his characters quirky humor A strong addition to most fantasy collections this crossgenre fantasy sf adventure should also appeal to mature YAs Library Journal *Mythprint*, 2007

Night on Earth Davide Rodogno, 2021-12-09 Night on Earth is a broad ranging account of international humanitarian programs in Central and Eastern Europe the Balkans and the Near East from 1918 to 1930 Davide Rodogno shows that international relief and development were intertwined long before the birth of the United Nations with humanitarians operating in a region devastated by war and famine and in which state sovereignty was deficient Influenced by colonial motivations and ideologies these humanitarians attempted to reshape entire communities and nations through reconstruction and rehabilitation programmes The book draws on the activities of a wide range of secular and religious organisations and philanthropic foundations in the US and Europe including the American Relief Administration the American Red Cross the Quakers Save the Children the Near East Relief the American Women s Hospitals the League of Nations and the International Committee of the Red Cross **The Short Of It** H A Howe, 2024-11-11 In this collection of twenty one short stories explore the depths of human emotion through love happiness tragedy and the poignant moments that define our lives Each story offers a window into the lives of unique individuals each on a quest to fulfill their deepest desires From a son s desperate search for his mother s approval in Out of the Shadows to the haunting consequences of a friendship in Adult Education and the dystopian tension of a seemingly perfect state in A Good System these stories pull you into a world where love can be both a saving grace and a destructive force as seen in For Love s Sake Discover the mystery of a son s quest for justice in The Mystery Man and the biting critique of modern vanity in Such Luck This collection of compelling narratives will resonate with anyone who has ever wrestled with life s complexities and contradictions **Systems Science and Cybernetics - Volume II** Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories

addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatorial problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence
