The Origin and Evolution of Intelligence Arnold B. Scheibel, J. William Schopf, 1997      *Major Events in the History of Life*  
+ *Origin & Evolution of Intelligence*, 1997      **Origins of Intelligence** Sue Taylor Parker, Michael L. McKinney, 2021-04-27

A look at the origins of cognitive abilities in primate species Since Darwin's time comparative psychologists have searched for a good way to compare cognition in humans and nonhuman primates In *Origins of Intelligence* Sue Parker and Michael McKinney offer such a framework and make a strong case for using human development theory both Piagetian and neo Piagetian to study the evolution of intelligence across primate species Their approach is comprehensive covering a broad range of social symbolic physical and logical domains which fall under the all encompassing and much debated term intelligence A widely held theory among developmental psychologists and social and biological anthropologists is that cognitive evolution in humans has occurred through juvenilization the gradual accentuation and lengthening of childhood in the evolutionary process In this work however Parker and McKinney argue instead that new stages were added at the end of cognitive development in our hominid ancestors coining the term adultification by terminal extension to explain this process Drawing evidence from scores of studies on monkeys great apes and human children this book provides unique insights into ontogenetic constraints that have interacted with selective forces to shape the evolution of cognitive development in our lineage The authors elegant theory and comprehensive empirical synthesis of how the development of human intelligence and brain evolved opens up cascading heuristic avenues for creatively answering one of the great questions in the human history of ideas Jonas Langer Human Development A handy source of information on comparative cognitive abilities related to life history and brain variables James Anderson Journal of the Royal Anthropological Institute      **The Origin of Mind** David C. Geary, 2005-01-01 Geary also explores a number of issues that are of interest in modern society including how general intelligence relates to academic achievement occupational status and income BOOK JACKET      *The Origin of Intelligence* Thomas D. Kerr, 2009 What does the place of information within the cosmos have to do with the life of any one person or with the nature of right and wrong It changes everything Information can be viewed as nothing more than an ephemeral artefact of matter energy space and time Or it can be viewed as a component of the universe every bit as real and consequential as the others This book shows not only that information is real in its own right but that the intelligence found in people would not have come into existence if it were not The most powerful tool and weapon of humans is the information system their minds together comprise Individuals in all their variety are the way they are because that is the way that together they are most intelligent From the evolutionary mechanism which generated human intelligence to the affairs of people today the driving force has always been the role of information in individual lives The result of their decisions through the distant past has been a kind of intelligence new in the universe People together form a functional mental system that is of a higher order of complexity and intelligence than any individual mind could be Individual minds are designed not to survive

alone in a wilderness but to complement the human information system as a whole To make the system function human intelligence and morality necessarily evolved together People can think together only if they get along The basic outlines of morality are as fixed and timeless and as rooted in human evolution as the intelligence it evolved with Each is both cause and product of the other The intelligence of the human information system as a whole is the central principle of human life Acknowledging the reality of information changes forever the divide between secular and religious outlooks Religions envision the information world by belief in an invisible network of connections between people and the world around them But these connections exist in hard reality because the existence of information is just as real and provable as the existence of rocks Dividing reality by believing that physical things are real and information is not trivialises the most important aspect of human existence Once the illusion that information is not real is given up the basic relationships of life re assume the kinds of firm definitions that they have always been given by religions To live in harmony with the reality of information each person must find a way to recognise that their own thoughts and feelings which consist of information are just as real as any objects they think about This has always been the essential doorway to reality opening to a world of enormous intelligence love and beauty Reasons to care about other people appear clearly and simply as features of the way things are endowing every life with a sense of purpose as an indispensable element of the human information system Together humans exist to wonder and speculate create and explore seek truth and solve the riddles of the universe

Sam Goldstein,Dana Princiotta,Jack A. Naglieri,2014-12-08 Numerous functions cognitive skills and behaviors are associated with intelligence yet decades of research has yielded little consensus on its definition Emerging from often conflicting studies is the provocative idea that intelligence evolved as an adaptation humans needed to keep up with and survive in challenging new environments The Handbook of Intelligence addresses a broad range of issues relating to our cognitive and linguistic past It is the first full length volume to place intelligence in an evolutionary cultural framework tracing the development of the human mind exploring differences between humans and other primates and addressing human thinking and reasoning about its own intelligence and its uses The works of pioneering thinkers from Plato to Darwin Binet to Piaget Luria to Weachslers are referenced to illustrate major events in the evolution of theories of intelligence leading to the current era of multiple intelligences and special education programs In addition it examines evolutionary concepts in areas as diverse as creativity culture neurocognition emotional intelligence and assessment Featured topics include The evolution of the human brain from matter to mind Social competition and the evolution of fluid intelligence Multiple intelligences in the new age of thinking Intelligence as a malleable construct From traditional IQ to second generation intelligence tests The evolution of intelligence including implications for educational programming and policy The Handbook of Intelligence is an essential resource for researchers graduate students clinicians and professionals in developmental psychology assessment testing and evaluation language philosophy personality and social psychology sociology and developmental biology

**Intelligence** Rolf W. Frohlich,2009-04 Human nature holds the intelligence of life It provides a psychology that is much stronger more effective and more reliable than the psychology society teaches us This psychology taps into the evolutionary survival experience of our species which occupied most of human history It was the period when the species evolved and our ancestor survived as a hunter and gatherer More than 99% of human history is encoded in the DNA of our genes and lastingly etched into the human psyche Our natural psychology the human psyche is the result of evolutionary adaptation The psyche provides the genetic capacity for behavioral mental and spiritual adaptation It supports the gratification of our needs And it contains the blueprint of human life The book is about human nature and human survival Human nature that is the human psyche has survival value The book introduces a metapsychology that refers to the Jungian archetypes and the survival capabilities inherent in the psyche Like all living organisms and forms of life we possess an innate capacity for survival By awakening this evolutionary intelligence we gain access to the primordial power and wisdom of the archetypal psyche This innate psychology transcends the cultural conditioning that has shaped us all and erects an entirely different reference system making us look at life in a new way We live in a world that reflects human nature and we are well equipped to survive in it Beyond that there is also something in us that resonates with a larger context Our psychological constitution relates us to the outer realities of nature and cosmos It is in this sense that we partake in the evolution of life on this planet and in the larger design of a cosmic universe This primary psyche is shared by all humanity as part of a common biological and psychological history

**The Journal of Intelligence History** , *The Thinking Ape* Richard W. Byrne,1995 This text describes how human ancestors reached the point in cognitive evolution from which the evolution of modern humans was possible Rather than speculating about the mental abilities of fossil hominids on the basis of modern human psychology the author explores earlier phases of evolution with the more solid and testable evidence of human ancestry that is still alive modern primates and other animals

*Habit and Intelligence: a Series of Essays on the Laws of Life and Mind* Joseph John Murphy, 1879 Origins of Intelligence Sue Taylor Parker, Michael L. McKinney, 1999-06-16 The authors' elegant theory and comprehensive empirical synthesis of how the development of human intelligence and brain evolved opens up cascading heuristic avenues for creatively answering one of the great questions in the human history of ideas: Human Development. *Central Intelligence*, 2001 Race and Intelligence Jefferson M. Fish, 2013-05-13 In recent years, reported racial disparities in IQ scores have been the subject of raging debates in the behavioral and social sciences and education. What can be made of these test results in the context of current scientific knowledge about human evolution and cognition? Unfortunately, discussion of these issues has tended to generate more heat than light. Now the distinguished authors of this book offer powerful new illumination. Representing a range of disciplines—psychology, anthropology, biology, economics, history, philosophy, sociology, and statistics—the authors review the concept of race and then the concept of intelligence. Presenting a wide range of findings, they put the experience of the United States so frequently the only focus of attention in global perspective. They also show that the human species has no races in the biological sense, though cultures have a variety of folk concepts of race; that there is no single form of intelligence; and that formal education helps individuals to develop a variety of cognitive abilities. *Race and Intelligence* offers the most comprehensive and definitive response thus far to claims of innate differences in intelligence.
