

An aerial photograph of a rugged, mountainous landscape. The terrain is characterized by steep, rocky slopes and deep, winding valleys. Several roads or paths are visible, snaking through the landscape. The overall color palette is dominated by earthy tones, including browns, tans, and greys, suggesting a dry or semi-arid environment. The lighting creates strong shadows, emphasizing the topography.

Neolithic Dew-ponds and Cattle-ways Arthur John Hubbard, Henry Griffin, George Hubbard, 1916      **Neolithic Dew-Ponds and Cattle-Ways (Classic Reprint)** Arthur John Hubbard, 2016-06-27 Excerpt from Neolithic Dew Ponds and Cattle Ways IN dealing with the subject of Prehistoric Man it is impossible to speak definitely owing to the absence of all historic records The chief evidence of his existence is to be found in the great earthworks he constructed and the implements he formed out of flint It may be safely assumed that Prehistoric Man was immeasurably more exposed to attack from the animal world than his successors are to day and if one always bears this fact in mind some satisfactory explanation may be found of the earthworks he constructed around his settlements which in many cases extended for several miles from the centre of his habitation About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works      Neolithic Dew-Ponds and Cattle Ways Arthur John Hubbard, George Hubbard, 2003-04 There is in England at least one wandering gang of men who will construct for the modern farmer a pond which in any suitable situation in a sufficiently dry soil will always contains water The water is not derived from springs or rainfall and is speedily lost if even the smallest rivulet is allowed to flow into the pond The gang of dew pond makers commence operations by hollowing out the earth for a space far in excess of the apparent requirements of the proposed pond They then thickly cover the whole of the hollow with a coating of dry straw The straw in turn is covered by a layer of well chosen finely puddled clay and the upper surface of the clay is then closely strewn with stones Care has to be taken that the margin of the straw is effectively protected by clay The pond will eventually become filled with water the more rapidly the larger it is even though no rain may fall If such a structure is situated on the summit of a down during the warmth of a summer day the earth will have stored a considerable amount of heat while the pond protected from this heat by the non conductivity of the straw is at the same time chilled by the process of evaporation from the puddled clay The consequence is that during the night the warm air is condensed on the surface of the cold clay As the condensation during the night is in excess of the evaporation during the day the pond becomes night by night gradually filled Theoretically we may observe that during the day the air being comparatively charged with moisture evaporation is necessarily less than the precipitation during the night In practice it is found that the pond will constantly yield a supply of the purest water      Neolithic Dew-Ponds and Cattle-Ways Arthur John Hubbard, Henry Griffin, 2015-11-18 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the
