Chasing Neotropical Birds Bob Thornton, Vera Thornton, 2010-07-22 This book is for anyone who loves nature photography or birding A fine introduction to the beauty and diversity of this region Southeastern Naturalist From Belize to Brazil the forests of the American neotropics are home to an astonishing array of birds over 3 700 different species or nearly forty percent of all the birds on earth Birding enthusiasts

Vera and Bob Thornton have spent fifteen years photographing these special and exotic birds in the rainforests of eleven different countries of Central and South America. In this book you will find more than a hundred spectacular color photographs they took during their travels along with a highly entertaining account of their adventures and misadventures in chasing these exotic neotropicals. The birds pictured here are among the Thorntons' personal favorites: birds that in their words either dazzled us with their beauty or charmed us by their behavior or in a few cases simply challenged us by the mystique of their rarity. This latter category includes such elusive and sought-after birds as the Black-crowned Antpitta, the Zigzag Heron, the Rufous-vented Ground Cuckoo, the Bare-necked Umbrellabird, and the monkey-eating Harpy Eagle. In the accompanying text, Bob Thornton engagingly describes the challenges as well as the magic of negotiating the neotropical rainforests in search of colorful birds to photograph. For those who would like to follow in the Thorntons' footsteps, there are also helpful tips about photographic gear and techniques, preferred places to see the birds, lodging, and guides. For everyone who enjoys excellent nature photography, *Chasing Neotropical Birds* is a must-have volume. — *Neotropical Birds of Prey*, David F.

Whitacre, 2013-03-01. Until recently, surprisingly little has been known about the biology and behavior of tropical forest raptors, including such basic aspects as diets, breeding biology, habitat requirements, and population ecology information critical to the development of conservation efforts. The Peregrine Fund conducted a significant eight-year-long research program on the raptor species, including owls, in Tikal National Park in Guatemala to learn more about Neotropical birds of prey. Impressive and unprecedented in scale, this pioneering research also involved the development of new methods for detecting, enumerating, and studying these magnificent but often elusive birds in their forest home. Beautifully illustrated with photographs of previously little-known species, the resulting book is the most important single source for information on the lowland tropical forest raptor species found in Central America. *Neotropical Birds of Prey* covers twenty specific species in depth, including the Ornate Hawk Eagle, the Barred Forest Falcon, the Bat Falcon, and the Mexican Wood Owl, offering thorough synopses of all current knowledge regarding breeding biology and behavior, diet, habitat use, and spatial needs. Contributors to this landmark work also show how the populations fit together as a community with overlapping habitat and prey needs that can put them in competition with reptiles and mammalian carnivores, as well as yet differ from one another in their nesting or feeding behaviors and population dynamics. The work's substantive original data offer interesting comparisons between tropical and temperate zone species and provide a basis for establishing conservation measures based on firsthand research. Making available for the first time new data on the biology, ecology, behavior, and conservation of the majestic owls and raptors of the New World tropics, this book will appeal to a wide ornithological readership, especially the many raptor enthusiasts around the world. — *Neotropical Migratory Birds*, Richard M. DeGraaf, John H. Rappole, 1995. Thrushes, warblers, vireos, and tanagers are probably the most familiar of the Neotropical migrants: birds that breed in the United States and Canada, then journey to spend the winter in the Caribbean, Mexico, or southward. But this extraordinary

group actually comprises a large number of diverse species including waterfowl shorebirds terns hawks flycatchers and hummingbirds In their compendious review of information on these birds Richard M DeGraaf and John H Rappole illuminate the need for a thorough understanding of the ecology of each species one that extends throughout the entire life cycle The authors argue convincingly that conservation efforts must be based on such an understanding and carried out across a species range not limited to the breeding grounds This book is the first to summarize in one volume much needed practical data about the distribution and breeding habitat requirements of migratory birds in North and South America The body of the book consists of natural history accounts of more than 350 species of Neotropical migrants including a brief description of each bird s range status habitats on breeding grounds nest site and wintering areas The authors provide a complete range map of each species distribution in the Western Hemisphere as well as notes on the distribution basic data that until recently have largely been unavailable in usable form to ornithologists and land and resource managers An appendix lists species that are increasing or decreasing at significant rates in various physiographic regions of North America Critical Notes on the Types of Little-known Species of Neotropical Birds Carl Eduard Hellmayr,1913 **Manual of Neotropical Birds, Volume 1** Emmet Reid Blake,1977-07-01 Containing more than one third of the world s bird species the neotropical region surpasses all other zoogeographic regions in the diversity of its avian fauna Though the exploration and cataloging stages of ornithology are now virtually complete new species and undescribed subspecies of birds are still occasionally discovered In this manual Emmet R Blake has drawn on his experience of forty eight years in the field and laboratory to prepare a comprehensive detailed and authoritative synopsis of the avifauna of tropical America as now known *Neotropical Owls* Paula L. Enriquez,2017-07-24 This book presents a comprehensive biological and ecological information about owls in the neotropic area In addition the book covers topics such as threats and conservation strategies for these nocturnal birds of prey from 18 Neotropical countries Owls are a good example of diversification processes and have developed evolutionary characteristics themselves These species are found almost everywhere in the world but most of them are distributed in tropical areas and about a third of them live in the Neotropics This biogeographic region has a high biodiversity and even share lineages of species from other continents because at some point all were part of Pangea Although we still have much to know and understand about this diverse scarcely studied and threatened group this work aims to be a precedent for future and further research on the subject **Birds of Tropical America** Steven Hilty,Mimi Hoppe Wolf,2005-04-01 Originally published Shelburne Vt Chapters c1994 in series The curious naturalist series **Neotropical Birds** ,1996 Bird communities are sensitive indicators of habitat type and condition Therefore careful ornithological surveys can provide quick practical assessments of the ecological characteristics and conservation status of many terrestrial communities in the tropical Americas This volume provides the data essential to the success of such surveys It compiles for the first time information on the ecological and geographical distributions of all 4 037 bird species of the *North American Birds* H.
