It will help anyone looking for new cost effective ways to build LAN switches RAID systems multimedia servers or multiprocessors. It will help the small company looking for an edge to break into the market and the large one looking for ways to improve its margins and boost its market share. This handbook, the result of over six man years of effort at the PACT Research Institute, provides solid engineering data for the computer systems professional. Four cpu months of system simulation are summarised in an easy to read form allowing the consequences of different design decisions to be simply compared. The Network Designer's Handbook explains the principles of the new generation of small scale low buffer serial interconnects. Using the specific example of IEEE 1355 1995 links and the STC104 high valency switch chip it shows how this technology can provide modular fault tolerant and scalable interconnect. The picture is rounded out with descriptions of network topologies case studies and many practical tips.
