## **SPOTIFY: HOW THE COMPANY USES DATA TO INFLUENCE MUSIC TASTES**

**AROUND THE WORLD** MAX EDITORIAL, 2025-04-15

Introduction to the World of Data and Spotify

The digital revolution has transformed the way we consume music and Spotify is one of the biggest drivers of this transformation. The streaming app launched in 2008 has grown exponentially not just as a music service but as a platform that analyzes, collects and uses data on its users' behavior to personalize the music experience for billions of people around the world. The key to Spotify's success is not only its vast library of music but its ability to use data to influence, shape and even predict users' musical tastes.

**The Era of Music Streaming**

Before Spotify, the music industry was dominated by CD purchases, individual downloads and of course radio. While radio has been a dominant platform for introducing new music for decades, it has its limitations. Spotify, with its data-driven model, has revolutionized this dynamic by offering nearly unlimited access to music while also personalizing track suggestions based on users' listening behavior.

**The Power of Data**

Spotify's biggest advantage over other music platforms is its ability to capture data. Every time a user listens to a song, skips a track or saves a song to a playlist, Spotify collects this information and uses it to improve its music recommendations. Spotify's recommendation algorithm is powered by a wealth of data about users' preferences, creating a personalized experience for each user.

**How Data Shapes Music Preferences**

Data collection goes beyond just choosing songs. Spotify monitors listening time, playlist engagement, repeat tracks and even the times when a user is most likely to listen to a certain style of music. This data is then processed to create a detailed profile of each user, helping the platform predict which songs are most likely to appeal to them.

**Practical Example**

Imagine that you are a fan of pop music and frequently listen to the most popular tracks on the charts. Spotify, by noticing this pattern, can recommend similar songs that are starting to gain popularity or even songs by emerging artists in the same style, influencing your musical tastes before you have even heard of them.

The Age of Music Streaming Anna Marie Lillian Filipcic, 2021 The purpose of this study was to explore how use of a web application that makes use of Spotify APIs may be utilized by music therapists to inform clinical decisions. Spotify Charts was used to identify weekly top streamed songs on Spotify and the web application Sort Your Music was used to examine musical attributes including tempo, energy, danceability, loudness, valence, length, acousticness, and popularity for top streamed songs on Spotify in the United States in 2020. Multiple Pearson correlation analyses were used to examine how specific Spotify musical attributes identified by Sort Your Music compared to previous research on the relationship between specific musical attributes and perceptions of valence and arousal in music. In line with previous research results of the present study indicated positive relationships between energy and loudness ( $r = .711$ ) and tempo and energy ( $r = .590$ ). However, contrary to previous research results of this study indicated a negative relationship between tempo and valence ( $r = -.590$ ). Further results and implications for the use of Sort Your Music as a resource to guide music therapy clinical decisions related to music selection are discussed within this paper.
