Wavelength Division Multiplexed WDM optical networks are emerging as promising candidates for the infrastructure of the next generation Internet. Such networks are envisaged for spanning local metropolitan and wide geographical areas. WDM optical networks go beyond technologies such as Synchronous Optical Network SONET and Asynchronous Transfer Mode ATM in realizing the full potential of the optical medium. From passive star coupler based broadcast optical networks to switch based optical wavelength routed networks the book covers a wide range of available technologies and designs for proposed network architectures. The author investigates the impact of physical layer issues on the design of such WDM based optical networks. In particular this book presents a sampling of problems such as amplifier placement and optimization sharing and minimization of wavelength converter usage and bit error rate BER based all admission in WDM optical networks and proposes novel solutions. Efficient algorithms are described which significantly improve the cost effectiveness of WDM
