Math Facing An American Phobia:

Math Marilyn Burns, 1998 Humorously Uncovers the Reasons Behind Math's Dreadful Reputation and Shows us How we Can Help Prevent Our Own Children From Adopting Similar Phobic Attitudes **The Language of Mathematics** Bill Barton, 2007-12-24 The book emerges from several contemporary concerns in mathematics language and mathematics education However the book takes a different stance with respect to language by combining discussion of linguistics and mathematics using examples from each to illustrate the other The picture that emerges is of a subject that is much more contingent much more relative much more subject to human experience than is usually accepted Another way of expressing this is that the thesis of the book takes the idea of mathematics as a human creation and using the evidence from language comes to more radical conclusions than most writers allow Math Wars Carmen Latterell, 2004-12-30 This book is written for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math The debate centers around the standards written by the National Council of Teachers of Mathematics NCTM which call for a radically different approach to mathematics education Because the issues are so heated between the NCTM oriented curricula and traditional curricula the curricula that NCTM oriented replaced the term Math Wars was coined to describe them Parents are concerned about their children's math learning Teachers are concerned about math teaching When parents see what children are bringing home under the new curriculum it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school But the problem goes beyond grades K 12 Post secondary mathematics courses are the fear of many students The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college Besides lack of knowledge about mathematics education many parents have an additional problem in that they feel they lack knowledge in mathematics itself This is very intimidating thus it is difficult for parents to do anything about the confusing state of mathematics education This book provides some answers **ENC Focus** , 2001 **College in a Can** Sandra Choron, Harry Choron, 2004 Features a practical collection of lists that will prepare students for college life **Living with Anxiety Disorders** Allen R. Miller, 2008 Explains what anxiety disorders are treatment options and offers teens advice on how to successfully deal with them

Harcourt Math, Grade 1 HSP, 2002 Mathematics program for grades K 6 provides focused instruction on key skills comprehensive assessment targeted intervention and practice for mastery and retention Mathematics Content for Elementary and Middle School Teachers Barbara Ridener, Penelope Joan Fritzer, 2004 A short primer on each of the major math content areas that preservice and inservice elementary and middle school teachers are required to know This book is an invaluable resource for the classroom teacher who needs both an overview for planning and help in answering student questions Based broadly on the national standards it gives the teacher general scientific information to cover most state standards and to help prepare them for teacher certification exams It also provides a strong overview of mathematical

knowledge to allow the teacher to find information on important concepts to see where significant moments in mathematical history fit chronologically and to improve the teacher's understanding of mathematical ideas and concepts. Moreover, it saves professors from having to re-teach mathematics content so they can remain focused on the methods.

Teachers Engaging Parents and Children in Mathematical Learning Regina M. Mistretta, 2008-02-07 This book serves to enliven three-way partnerships among parents, teachers, and students concerning mathematical learning in elementary and middle school settings. Key tenets of the principles concerning constructivism and overlapping spheres of influence are presented in the first two chapters to provide a solid theoretical basis for teaching mathematics the way we do and for involving parents in the learning process. The remaining chapters describe parental involvement initiatives that reflect a model consisting of an invitation, an initial meeting, an engagement workshop, home activities, a follow-up session, and additional tasks to maintain connections between the mathematics classroom and the home. This resource is meant for use in teacher education, in preparing school administrators, and in other courses or workshops that prepare professionals to work in mathematics classrooms and with families. It can be used in conjunction with a methods text or as a supplementary text in courses on mathematics education at elementary and middle school levels. Chapters may also be selected for courses in sociology of education, practicum, teaching seminars, educational administration, community education, and staff development.

A Collection of Math Lessons Marilyn Burns, Cathy Humphreys, 1990 Offers inspiring, practical, classroom-tested ideas for helping students learn mathematics through problem solving.

Sensible Mathematics Steve Leinwand, 2000 Designed for school leaders, this highly useful guide provides the tools you need to make a vision of sensible mathematics a reality for all students.

Helping Students who Struggle with Math and Science Dennis Adams, Mary Hamm, 2008 This book provides teachers with research-based and standards-driven techniques that are especially useful for reaching all students in the classroom.

Teaching Children Mathematics, 1998

Learning Mathematics in Elementary and Middle Schools W. George Cathcart, 2001 Text is appropriate for courses in Mathematics for the Elementary School. Built on the foundation of the new 2000 NCTM Principles and Standards, this major new entry for K-8 math methods has impacted the market because of its point of use, links to the standards, and its emphasis on the importance of a child-centered approach creating a learning environment that informs teachers how to support children as they build understandings of math concepts. Designed to be neither skimpy nor exhaustive, this text presents theory in an accessible manner and models a wealth of practical activities for teaching. Five videos from the Annenberg CPB TEACHING MATH video series bring real classrooms to life for teachers and are integrated into the text as four color resourceful inserts.
