Levy, 2024-09-17 Introductory Psychology and the Human Condition provides an engaging, cohesive, and practical treatment of traditional psychological principles and theories. The book uses Maslow's human needs hierarchy and Bronfenbrenner's ecological theory of development as organizational schemas for considering how cultures have evolved to address human needs. It relates major psychological processes, including biology, perception, motivation, learning, and cognition, to lifespan and personality development in nomadic hunter gatherer and technologically enhanced cultures. Human history is described as a feedback loop in which inventions and technologies result in the need for individuals and cultures to adapt to changing environmental and social conditions.
