Materials Management Systems:

Materials Management Systems Robert Goodell Brown, 1984

Materials Management Rajendra Mishra, 2009

Materials management is an essential business function. It is concerned with managing materials, one of the four basic resources: labour, material, equipment, and capital. Until recently, it was concerned with purchasing raw materials, and very few parts from local markets. Raw materials were used to make most of the parts for making end products. Materials management was regarded as a routine function and was given less importance. But over the years, firms began to procure more and more parts and subassemblies from local as well as global markets. Today, over 50% of the revenue of the firms goes for procuring materials, parts, and subassemblies from outside. As a result, the materials management function has evolved from a clerical buying function into a strategic business function that helps firms to survive and grow. It creates a competitive edge by creating superior value by delivering quality product or service on time and offering lower cost by cutting its own cost as well as cutting purchased item cost. Very few of the available texts offer a comprehensive view of the subject. Data and examples and cases in the context of Indian industries are limited. The contents of the subject are undergoing rapid changes. Earlier, purchasing was mostly confined to raw materials by manufacturing firms, whereas now a large part of it consists of parts, subassemblies, and assemblies beside raw materials. A smaller number of suppliers are preferred now a days. Global sourcing is an accepted norm. A change in supplier relations from adversarial to partnership is evident. Lot sizes and lead times are smaller, and there is greater use of information technology. The book is designed to provide comprehensive coverage of the field of materials management by including emerging concepts, practices, tools, techniques, heuristics, and quantitative models. Other features of the book include v Important topics like outsourcing, purchase strategies, and enterprise resource planning v Cases from Indian industries on vendor managed inventory, outsourcing, and spare parts inventory v Definition of key terms v Questions at the end of each chapter and answers of selected questions. The book can serve as a text for undergraduate and postgraduate level courses on materials management in the institutes of management, engineering, and technology, materials, industrial engineering, operations research, and others. It can also serve as a reference for managers, engineers, consultants, and others interested in the field.

Ross,2012-12-06 It has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events It is not that the facts of history have changed No one will dispute that the battle of Waterloo occurred on June 11 1815 or that the allied invasion of Europe began on June 6 1944 What each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation By examining the facts of history from a new perspective today s historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals Although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today s organizational cultural and economic realities Hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities *Service Management Systems* David P. Materials management G.K. Beckman-Love,L. Nieger,2012-12-06 For decades the materials sector of an enterprise has been relatively un important compared with the production and sales side but it has gained in importance during the last 25 30 years This is clearly indicated by the increas ing attachment of this sector to the commercial side of an enterprise the delegation of materials oriented tasks to highly qualified people and closely correlated the integration of the materials sector with the key positions of a company s organizational hierarchy The materials management area has become an interesting part of business life Stimulating this development was the realization that an important part of company rationalization had been overlooked namely provision of ade quate supervision of the materials flow This area was given particular atten tion firstly because the relatively high percentage of materials l osts the value of materials and cost of supervision in the total production costs off ered the possibility of considerable cost reductions and liquidity improvem ents and secondly because effective supervision permits faster reactions to changes and reliable delivery times essential considerations for a compe titive company An important contribution to the realization of these possi bilities is found in an efficient organizational structure in combination with an integrated information system Together they provide coordinated super vision of the various control functions associated with the materials flow and a concentration of expertise
