Mathematical Aspects of Scheduling and Applications R. Bellman,A. O. Esogbue,I. Nabeshima,2014-05-20
Mathematical Aspects of Scheduling and Applications addresses the perennial problem of optimal utilization of finite resources in the accomplishment of an assortment of tasks or objectives The book provides ways to uncover the core of these problems presents them in mathematical terms and devises mathematical solutions for them The book consists of 12 chapters Chapter 1 deals with network problems the shortest path problem and applications to control theory Chapter 2 stresses the role and use of computers based on the decision making problems outlined in the preceding chapter Chapter 3 classifies scheduling problems and their solution approaches Chapters 4 to 6 discuss machine sequencing problems and techniques Chapter 5 tackles capacity expansion problems and introduces the technique of embedded state space dynamic programming for reducing dimensionality so that larger problems can be solved Chapter 6 then examines an important class of network problems with non serial phase structures and exploits dimensionality reduction techniques such as the pseudo stage concept branch compression and optimal order elimination methods to solve large scale nonlinear network scheduling problems Chapters 7 to 11 consider the flow shop scheduling problem under different objectives and constraints Chapter 12 discusses the job shop scheduling problem The book will be useful to economists planners and graduate students in the fields of mathematics operations research management science computer science and engineering

Mathematical Aspects of Scheduling and Applications Richard Bellman, Augustin O. Esogbue, Ichirō Nabeshima, 1982 *Optimization Models and Concepts in Production Management* Bradimaarte, 1995-04-13 Optimization techniques in production management are becoming increasingly important for efficient and competitive manufacturing This book presents a collection of tutorial papers by outstanding researchers on the application of optimization concepts Topics introduced include hierarchical production planning and large scale scheduling optimal production control exact and heuristic algorithms for production scheduling and stochastic modelling

Mathematical Modelling Murray S. Klamkin, 1987-01-01 Designed for classroom use this book contains short self contained mathematical models of problems in the physical mathematical and biological sciences first published in the Classroom Notes section of the SIAM Review from 1975 1985 The problems provide an ideal way to make complex subject matter more accessible to the student through the use of concrete applications Each section has extensive supplementary references provided by the editor from his years of experience with mathematical modelling
