Swerdlow, O. Neugebauer, 2012-12-06 When I first laid out the framework for A History of Ancient Mathematical Astronomy I intended to carry the discussion down to the last applications of Greek astronomical methodology i.e. Copernicus Brahe and Kepler But as the work proceeded it became evident that this plan was much too ambitious and so I decided to terminate my History with late antiquity well before Islam Nevertheless I did not discard the running commentary that I had prepared when studying De revolutionibus in its relation to the methodology of the Almagest Only recently E S Kennedy and his collaborators had opened access to the Maragha School mainly Ibn ash Shalir revealing close parallels to Copernicus's procedures Accordingly it seemed useful to make available a modern analysis of De revolutionibus and thus in 1975 I prepared for publication Notes on Copernicus In the meantime however Noel Swerdlow also starting from Greek astronomy not only extended his work into a deep analysis of De revolutionibus but also systematically investigated its sources and predecessors Peurbach Regiomontanus etc I was aware of these studies through his publications as well as from numerous conversations on the subject at The Institute for Advanced Study and at Brown University It became clear to me that my own investigations lay at too superficial a level and I therefore withdrew my manuscript and suggested to Swerdlow that he undertake a thoroughgoing revision and amplification of my Notes His acceptance of my proposal initiated the present publication **A History of Ancient Mathematical Astronomy** O. Mathematical Astronomy Morsels Jean Meeus,1997 **From Eudoxus to Einstein** C. M. Linton,2004-08-12 Since man first looked towards the heavens a great deal of effort has been put into trying to predict and explain the motions of the sun moon and planets Developments in man s understanding have been closely linked to progress in the mathematical sciences Whole new areas of mathematics such as trigonometry were developed to aid astronomical calculations and on numerous occasions throughout history breakthroughs in astronomy have only been possible because of progress in mathematics This book describes the theories of planetary motion that have been developed through the ages beginning with the homocentric spheres of Eudoxus and ending with Einstein s general theory of relativity It emphasizes the interaction between progress in astronomy and in mathematics showing how the two have been inextricably linked since Babylonian times This valuable text is accessible to a wide audience from amateur astronomers to professional historians of astronomy

Studies on the Transmission of Medieval Mathematical Astronomy Raymond Mercier,2024-12-11 Studies on the Transmission of Medieval Mathematical Astronomy opens with a new survey of the transmission of Hellenistic astronomy followed by two studies on how the notion of precession was treated by Babylonian Greek Indian Arabic and Latin hands Next is a survey of the astronomical tables that appeared in Latin during the 12th century drawn mainly from Arabic and to some extent from Hebrew as well as a special study of the Latin tables for London and Pisa drawn originally from the 10th century Islamic astronomer al Sufi For the Sanskrit texts the focus is on the demonstration that the systems were founded on observations made in India even though much of the theory was Greek in origin On Byzantine material there are studies of the Persian Syntaxis whose source lay in the Persian Zij i Ilkhani and of the diverse materials drawn on by Gemistus Plethon Mercier s work shows that there is a unity in medieval astronomy in spite of the great diversity in cultural settings which included South and Central Asia the Middle East Byzantium and Europe The texts were recorded in all the major languages of this great region from Sanskrit to Latin over a period of time stretching from the late classical world to late medieval

Europe Yet these astronomical texts have much in common drawn from the whole apparatus of Ptolemaic or rather more inclusively Greek astronomy Transmission is demonstrated partly by the continuity of technical terms and partly by the conservation and development of numerical parameters

Mathematical Astronomy for Amateurs E. A. Beet, 1972-05 This is a clear and simple introduction to the calculations that form the basis of all astronomical laws and observations Most elementary astronomy books are purely descriptive while textbooks of mathematical astronomy assume a considerable knowledge of mathematics Here the author relies only on simple school maths to help the amateur widen his horizons and interpret his observations

Babylonian Mathematical Astronomy: Procedure Texts Mathieu Ossendrijver, 2012-04-24 This book contains new translations and a new analysis of the procedure texts of Babylonian mathematical astronomy the earliest known form of mathematical astronomy of the ancient world The translations are based on a modern approach incorporating recent insights from Assyriology and translation science The work contains updated and expanded interpretations of the astronomical algorithms and investigations of previously ignored linguistic mathematical and other aspects of the procedure texts Special attention is paid to issues of mathematical representation and over 100 photos of cuneiform tablets dating from 350 50 BCE are presented In 2 3 years the author intends to continue his study of Babylonian mathematical astronomy with a new publication which will contain new editions and reconstructions of approx 250 tabular texts and a new philological astronomical and mathematical analysis of these texts Tabular texts are end products of Babylonian math astronomy computed with algorithms that are formulated in the present volume Procedure Texts
