Mathematical Carnival:

Mathematical Carnival Martin Gardner, 2020-10-06 Martin Gardner's Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists. Gardner in his crystal clear prose illuminated corners of mathematics especially recreational mathematics that most people had no idea existed. His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him. These columns were both a revelation and a gift when he wrote them; no one before Gardner had written about mathematics like this. They continue to be a marvel. This volume first published in 1975 contains columns published in the magazine from 1965 to 1967. This 1989 MAA edition contains a foreword by John H. Conway and a postscript and extended bibliography added by Gardner for this edition. *Mathematical Carnival* Martin Gardner, 1990 **Mathematical Carnival** Martin Gardner, 1976

MATHEMATICAL CARNIVAL: FROM PENNY PUZZLES, CARD SHUFFLES, AND TRICKS OF LIGHTNING CALCULATORS TO ROLLER COASTER RIDES INTO THE FOURTH DIMENSION. A NEW ROUND-UP OF TANTALIZERS FROM SCIENTIFIC AMERICAN WITH ELEGANT MATHEMATICAL COMMENTARIES AND AFTER THOUGHTS Martin Gardner, 1976 *All the Math That's Fit to Print* Keith Devlin, 1994 This volume collects many of the columns Keith Devlin wrote for The Guardian **The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition** Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art. In this groundbreaking study first published in 1983 and unavailable for over a decade, Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception—the curved spaces of non-Euclidean geometry and most important, a higher fourth dimension of space—were central to the development of modern art. The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence. That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists, Italian Futurists, and Marcel Duchamp to Max Weber, Kazimir Malevich, and the artists of De Stijl and Surrealism. In an extensive new Reintroduction, Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000. Although largely eclipsed by relativity theory beginning in the 1920s, the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s. In a remarkable turn of events, it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics. Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller, Robert Rauschenberg, and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak **Genius at Play** Siobhan Roberts, 2024-10-29 A multifaceted biography of a brilliant mathematician and iconoclast. A mathematician unlike any other.

John Horton Conway 1937 2020 possessed a rock star's charisma a polymath's promiscuous curiosity and a sly sense of humor Conway found fame as a barefoot professor at Cambridge where he discovered the Conway groups in mathematical symmetry and the aptly named surreal numbers He also invented the cult classic Game of Life a cellular automaton that demonstrates how simplicity generates complexity and provides an analogy for mathematics and the entire universe Moving to Princeton in 1987 Conway used ropes dice pennies coat hangers and the occasional Slinky to illustrate his winning imagination and share his nerdish delights Genius at Play tells the story of this ambassador at large for the beauties and joys of mathematics lays bare Conway's personal and professional idiosyncrasies and offers an intimate look into the mind of one of the twentieth century's most endearing and original intellectuals [Exemplary Practices for Secondary Math Teachers](#) Alfred S. and snake goddesses as positive forces that assert perceptual dimensions beyond those of the human and present a vision of Earth as agentive and animate With previous scholarship downplaying these aspects of modern works as uncanny hauntings or symptoms of capitalism s or anthropocentrism s destructiveness or within a blanket rubric of magical realism Hilary Thompson rejects this partitioning of them as products of an exotic East or global South By contrast this book builds a new critical framework for analysis of worldly spirits drawing on anthropological discussions of animism the newly recovered 1930s boundary crossing art movement Dimensionism and multispecies theories of animals diverse perceptual worlds Taking stock of novels published from 2018 2020 by such writers as Amitav Ghosh Andr Alexis Yangsze Choo Azareen Van der Vliet Oloomi Zeyn Joukhadar and Tanya Tagaq Thompson illuminates how these works extend an ecological call to decentre the human and align with multidimensional theories of art and literature to provide ways to read for rather than reduce the extra human dimensions emerging in contemporary fiction A refreshing rejection of ecological apocalypticism this book unsettles typical conceptualizations of both anglophone and Anthropocene literatures by invoking European art theory philosophy and non Western ideas on animism and spirits to put forward perceptions of the extra human as a form of dealing with the many uncertainties of today s different crises
