Inclusive Development and Multilevel Transboundary Water Governance - The Kabul River Shakeel

Hayat,2020-04-30 The four decades long ideological based insurgencies and conflict in the Kabul River Basin KRB have seriously hampered the relations and foreign policies of both Afghanistan and Pakistan Consequently it restricts them to solve various bilateral issues including transboundary waters This lack of cooperation over shared water resources is one of the barriers to achieve inclusive and sustainable development Additionally it has contributed to the prevailing anarchic situation where each country does what it wants The absence of a formal water sharing mechanism coupled with poor water management practices within both the riparian counties are resulting various flow and administration related challenges Moreover these challenges are further exacerbated by regional changes in social political environmental and economic systems The scholarly literature suggests that an analytical transboundary water governance framework is essential to address the challenges of water politicisation and securitisation quality degradation and quantity reduction Additionally the literature rarely integrates a a multi level approach b an institutional approach c an inclusive development approach or d accounts for the uses of different types of water and their varied ecosystem services for improved transboundary water governance To enhance human wellbeing and achieve inclusive and sustainable development in the KRB this research indicates that it is essential to 1 defrost frozen collaboration 2 bypass border dispute 3 use biodiversity and ecosystem services approach 4 address existing and potential natural and anthropogenic challenges 5 remove contradictions in the policy environment 6 combat resource limits and dependence by promoting collaboration on long term cost effective solutions and 7 enhance knowledge and dialogue on inclusive development **Water Governance in OECD Countries**

Organisation for Economic Co-Operation and Development (OECD),2011-11-04 Water Governance in OECD Countries A Multilevel Approach addresses multilevel governance challenges in water policy implementation and identifies good practices for coordinating water policy across ministries between levels of government and across local actors at subnational level Based on a methodological framework it assesses the main coordination gaps in terms of policy making financing information

accountability objectives and capacity building and provides a platform of existing governance mechanisms to bridge them Based on an extensive survey on water governance the report provides a comprehensive institutional mapping of roles and responsibilities in water policy making at national subnational level in 17 OECD countries It concludes on preliminary multilevel governance guidelines for integrated water policy *Multilevel Environmental Governance* Inger Weibust,James Meadowcroft,2014-03-28 The literature on Multi level governance MLG an approach that explicitly looks at the system of the many interacting authority structures at work in the global political economy has grown significantly over the last decade The authors in this volu **OECD Studies on Water Water Governance in Latin America and the Caribbean A**

Global Water Resources Cecilia Tortajada,Eduardo Araral,2021-09-26 This is a Festschrift in honour of Professor Asit K Biswas for his manifold contributions to water resources policy and management and his extensive efforts over six decades to generate synthesize apply and disseminate knowledge at national and global levels *Global Water Resources Festschrift in Honour of Asit K Biswas* includes invited contributions on global water issues from 23 globally renowned leaders in the public and private sectors as well as academia who have made significant contributions to the field of water resources policy management development and governance The vision and expertise of this distinguished group of experts provides a unique

focus on unfolding water issues and their bearing on world development This book will be of great value to scholars students and policymakers interested in water resource governance sustainable development and climate change The chapters in this book were originally published as a special issue of the International Journal of Water Resources Development **OECD Environmental Performance Reviews: Italy 2013** OECD,2013-03-08 This report is the third OECD review of Italy's environmental performance It evaluates progress towards sustainable development and green growth with a focus on policies that promote more effective and efficient water management and provide better incentives to tackle climate change The Right(s) to Water Pierre Thielborger,2013-10-31 **Environmental Water Markets and Regulation** Katherine Owens,2016-11-18 River systems around the world are degraded and are being used unsustainably Meeting this challenge requires the development of flexible regimes that have the potential to meet essential consumptive needs while restoring environmental flows This book focuses on how water trading frameworks can be repurposed for environmental water recovery and aims to conceptualise the most appropriate role for law in supporting recovery through these frameworks The author presents a comprehensive study of the legal frameworks in four jurisdictions the States of Oregon and Colorado in the western United States the province of Alberta in Canada and the Murray Darling Basin in Australia Basin State of New South Wales A close comparative analysis of these four jurisdictions reveals a variety of distinctive regulatory arrangements and collaborations between public and private actors In all cases the law has been deployed to steer and coordinate these water governance activities The book argues that each regime is based on a particular regulatory strategy with different conceptions of the appropriate roles for and relationships between various actors and institutions Legal frameworks do not have the capacity to rationalise and provide an overarching and absolute solution to the complex environmental and governance issues that arise in the context of environmental water transactions Rather the role of law in this context needs to be reconceptualised within the paradigm of regulatory capitalism as establishing and maintaining the limits within which regulatory participants can operate innovate and collaborate *Programme to Demonstrate Multi-functionality of Paddy Fields Over the Mekong River Basin (DMPF)* ,2010 *Water Governance as Connective Capacity* Nanny Bressers,2016-02-11 Water is becoming one of the world's most crucial concerns A third of the world's population has severe water shortage while three quarters of the global population lives in deltas which run the risk of severe flooding In addition many more face problems of poor water quality While it is apparent that drastic action should be taken in reality water problems are complex and not at all easy to resolve There are many stakeholders involved industries local municipalities farmers the recreational sector environmental organisations and others who all approach the problems and possible solutions differently This requires delicate ways of governing multi actor processes This book approaches the concept of water management from an interdisciplinary and non technical but governance orientation It departs from the fragmented nature of water management showing how these lack cooperation joint responsibility and integration and instead argues that the

capacity to connect to other domains levels scales organizations and actors is of utmost importance Connective capacity revolves around connecting arrangements such as institutions actors for instance individuals and approaches such as instruments These three carriers of connectedness can be applied to different focal points the objects of fragmentation and integration in water management The book distinguishes five different focal points 1 government layers and levels 2 sectors and domains 3 time orientation of the long and the short term 4 perceptions and actor frames 5 public and private spheres Each contributor pays attention to a specific combination of one focal point and one connective carrier Bringing together case studies from countries including The Netherlands United Kingdom Romania Sweden Finland Italy India Canada and the United States the book focuses on the question of how to deal with the various sources of fragmentation in water governance by organizing meaningful connections and developing connective capacity In doing so it provides useful scientific and practical insights into how connective capacity in water governance can be enhanced

Hydrocomplexity Shahbaz Khan, 2010 Partial contents Monitoring and Evaluating the Water Cycle Linking Climate Change with Water Cycle Management Parsimonious vs Complicated Approaches Whole of System and Adaptive Approaches Need for Transdisciplinary Issues Approaches to Deal with Water Related Ecosystems Integrated Approaches Role of Knowledge Platforms for Community Engagement From Artificial to Embodied Intelligence Water Allocation Dilemma Water Quality a Critical Issue Managing Hydrohazards

Water Governance in the Face of Global Change Claudia Pahl-Wostl, 2015-09-04 This book offers the first comprehensive treatment of multi level water governance developing a conceptual and analytical framework that captures the complexity of real water governance systems while also introducing different approaches to comparative analysis Applications illustrate how the ostensibly conflicting goals of deriving general principles and of taking context specific factors into account can be reconciled Specific emphasis is given to governance reform adaptive and transformative capacity and multi level societal learning The sustainable management of global water resources is one of the most pressing environmental challenges of the 21st century Many problems and barriers to improvement can be attributed to failures in governance rather than the resource base itself At the same time our understanding of complex water governance systems largely remains limited and fragmented The book offers an invaluable resource for all researchers working on water governance topics and for practitioners dealing with water governance challenges alike

Understanding Game-based Approaches for Improving Sustainable Water Governance Wietske Medema, Chengzi Chew, Jan Franklin Adamowski, Igor Mayer, Arjen Wals, 2020-04-28 The sustainable governance of water resources relies on processes of multi stakeholder collaborations and interactions that facilitate knowledge co creation and social learning Governance systems are often fragmented forming a barrier to adequately addressing the myriad of challenges affecting water resources including climate change increased urbanized populations and pollution Transitions towards sustainable water governance will likely require innovative learning partnerships between public private and civil society stakeholders It is essential that such partnerships

involve vertical and horizontal communication of ideas and knowledge and an enabling and democratic environment characterized by informal and open discourse There is increasing interest in learning based transitions Thus far much scholarly thinking and to a lesser degree empirical research has gone into understanding the potential impact of social learning on multi stakeholder settings The question of whether such learning can be supported by forms of serious gaming has hardly been asked This Special Issue critically explores the potential of serious games to support multi stakeholder social learning and collaborations in the context of water governance Serious games may involve simulations of real world events and processes and are challenge players to solve contemporary societal problems they therefore have a purpose beyond entertainment They offer a largely untapped potential to support social learning and collaboration by facilitating access to and the exchange of knowledge and information enhancing stakeholder interactions empowering a wider audience to participate in decision making and providing opportunities to test and analyze the outcomes of policies and management solutions Little is known about how game based approaches can be used in the context of collaborative water governance to maximize their potential for social learning While several studies have reported examples of serious games there is comparably less research about how to assess the impacts of serious games on social learning and transformative change

The Right(s) to Water Pierre Thielbörger, 2013-09-30 Politicians and diplomats have for many years proclaimed a human right to water as a solution to the global water crisis most recently in the 2010 UN General Assembly Resolution The human right to water and sanitation To what extent however can a right to water legally and philosophically exist and what difference to international law and politics can it make This question lies at the heart of this book The book s answer is to argue that a right to water exists under international law but in a more differentiated and multi level manner than previously recognised Rather than existing as a singular and comprehensive right the right to water should be understood as a composite right of different layers both deriving from separate rights to health life and an adequate standard of living and supported by an array of regional and national rights The author also examines the right at a conceptual level After disproving some of the theoretical objections to the category of socio economic rights generally and the concept of a right to water more specifically the manuscript develops an innovative approach towards the interplay of different rights to water among different legal orders The book argues for an approach to human rights including the right to water as international minimum standards using the right to water as a model case to demonstrate how multilevel human rights protection can function effectively The book also addresses a crucial last question how does one make an international right to water meaningful in practice The manuscript identifies three crucial criteria in order to strengthen such a composite derived right in practice independent monitoring enforcement towards the private sector and international realization The author examines to what extent these criteria are currently adhered to and suggests practical ways of how they could be better met in the future
