Bose, 2016-12-24 Revised and updated this concise new edition of the pioneering book on multidimensional signal processing is ideal for a new generation of students Multidimensional systems or m D systems are the necessary mathematical background for modern digital image processing with applications in biomedicine X ray technology and satellite communications Serving as a firm basis for graduate engineering students and researchers seeking applications in mathematical theories this edition eschews detailed mathematical theory not useful to students Presentation of the theory has been revised to make it more readable for students and introduce some new topics that are emerging as multidimensional DSP topics in the interdisciplinary fields of image processing New topics include Groebner bases wavelets and filter banks **Multidimensional Systems Theory** N.K. Bose, 1985-06-30 Approach your problem from the right end It isn't that they can't see the solution and begin with the answers It is that they can't see the problem Then one day perhaps you will find the final question G K Chesterton The Scandal of Father Brown The point of a Pin The Hermit Clad in Crane Feathers in R van Gulik's The Chinese Maze Murders Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics However the tree of knowledge of mathematics and related fields does not grow only by putting forth new branches It also happens quite often in fact that branches which were thought to be completely disparate are suddenly seen to be related Further the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years measure theory is used non trivially in regional and theoretical economics algebraic geometry interacts with physics the Minkowsky lemma coding theory and the structure of water meet one another in packing and covering theory quantum fields crystal defects and mathematical programming profit from homotopy theory Lie algebras are relevant to filtering and prediction and electrical engineering can use Stein spaces And in addition to this there are such new emerging subdisciplines as experimental mathematical CFD completely integrable systems chaos synergetics and large scale order which are almost impossible to fit into the existing classification schemes
