Informational Biopolymers of Genes and Gene Expression R.D. Blake, 2005-03-23 This new text examines the biophysics and biochemistry of nucleic acids and proteins carving out the dynamic interface between chemistry and molecular biology and providing a detailed picture of nucleic acids and proteins their structures biological properties and origins and evolution Full of novel insights informed by years of research and teaching R D Blake has written a new text that examines the biophysics and biochemistry of nucleic acids and proteins This book carves out the dynamic interface between chemistry and molecular biology and provides a detailed picture of nucleic acids and proteins their structures biological properties and origins and evolution While pitched at a level that is accessible to upper level undergraduate students of biology the book will likewise be of keen interest to researchers and graduate students in biology chemistry and the physical

sciences A broad range of topics accompanied with extensive references footnotes boxed asides chapter ending problems and detailed illustrations throughout combine to make this an ideal choice for courses on advanced biochemistry physical biochemistry nucleic acids and proteins biophysics and biochemistry molecular evolution and protein nucleic acid interactions *Multidomain Proteins* D. Cohen, 2013-03-19 Microbial physiology biochemistry and genetics allowed the formulation of concepts that turned out to be important in the study of higher organisms In the first section the principles of bacterial growth are given as well as the description of the different layers that enclose the bacterial cytoplasm and their role in obtaining nutrients from the outside media through different permeability mechanism described in detail A chapter is devoted to allostery and is indispensable for the comprehension of many regulatory mechanisms described throughout the book Another section analyses the mechanisms by which cells obtain the energy necessary for their growth glycolysis the pentose phosphate pathway the tricarboxylic and the anaplerotic cycles Two chapters are devoted to classes of microorganisms rarely dealt with in textbooks namely the Archaea mainly the methanogenic bacteria and the methylotrophs Eight chapters describe the principles of the regulations at the transcriptional level with the necessary knowledge of the machineries of transcription and translation The next fifteen chapters deal with the biosynthesis of the cell building blocks amino acids purine and pyrimidine nucleotides and deoxynucleotides water soluble vitamins and coenzymes isoprene and tetrapyrrole derivatives and vitamin B12 The two last chapters are devoted to the study of protein DNA interactions and to the evolution of biosynthetic pathways The considerable advances made in the last thirty years in the field by the introduction of gene cloning and sequencing and by the exponential development of physical methods such as X ray crystallography or nuclear magnetic resonance have helped presenting metabolism under a multidisciplinary attractive angle The level of readership presupposes some knowledge of chemistry and genetics at the undergraduate level The target group is graduate students researchers in Academia and industry

Structural and Functional Characterization of Staphylococcus aureus Enolase Vijay Hemmadi, 2023-01-09 Doctoral Thesis Dissertation from the year 2022 in the subject Biology Micro and Molecular Biology grade 9 5 course PhD language English abstract The presence of metabolic enzymes like enolase on the surface of *S aureus* has sparked considerable scientific debate Enolase rSaeno is found in *S aureus* as a fragile octamer and a robust dimer The catalytic octamer resides in the cytoplasm and engages in energy metabolism metal interchangeability and averting the host's massive metal exploitation In contrast the membrane bound dimer possesses a high affinity for host plasminogen and is involved in binding and immobilizing the host plasminogen on the *S aureus* The interaction of host plasminogen and rSaeno on the bacterial surface mediates the adherence of *S aureus* to the host and subsequently arbitrates plasminogen activator mediated activation of plasminogen The binding of dimeric rSaeno to the kringle domain of plasminogen prevents 2 antiplasmin mediated inhibition of plasmin Enolase is a moonlighting protein that serves two unrelated functions in two separate cell compartments using

two oligomeric conformations Moonlighting proteins for pathogenicity saves a great deal of energy for the pathogen and allows the bacterial invasion system to remain incognito to the host The pathogen develops an endless supply of host protease and disguises the host immune system by targeting copious host plasminogen Although enolase is conserved across species prominent structural variations can be utilized as potential competitive drug targets As *S. aureus* employs numerous multifunctional proteins for pathological invasion targeting enolase and other moonlighting proteins engaged in various steps of pathological invasion may serve as a potential means by which the pathological invasion of antibiotic resistant *S. aureus* can be prevented
