From the Contents: Organic Chemistry in Water, Homogeneous Catalysis in the Aqueous Phase, Technical Solutions, Technical Applications of Supercritical Fluids, Organic Organic Biphase Catalysis on a Laboratory Scale, Enantioselective Catalysis in the Fluorine Phase, Catalysis in Nonaqueous Ionic Liquids, Commercial Applications and Aspects of Ionic Liquids, Catalysis using Supercritical Solvents, Soluble Polymer Bound Catalysts, Polymer Bound Metal Complexes as Catalysts for C-C and C-N Coupling. Regulated Systems for Multiphase Catalysis Walter Leitner, 2008-07-11 Multiphase catalysis is a key technology for the competitive and sustainable production of fine chemicals in coming decades. A joint academic and industry consortium has developed tools for considering complex chemical and process based requirements when setting up a catalytic system. This book shows how the resulting competence covers such supercritical fluid (SCF) technology in catalysis, ionic liquids, ligand design for SFCs and ILs, thermomorphic solvent systems, reactor design and more.

Sustainable Industrial Chemistry Fabrizio Cavani, Gabriele Centi, Siglinda Perathoner, Ferruccio Trifirò, 2009-09-22 In recent years the need for sustainable process design and alternative reaction routes to reduce industry's impact on the environment has gained vital importance. The book begins with a general overview of new trends in designing industrial chemical processes which are environmentally friendly and economically feasible. Specific examples written by experts from industry cover the possibilities of running industrial chemical processes in a

sustainable manner and provide an up to date insight into the main concerns e.g. the use of renewable raw materials, the use of alternative energy sources in chemical processes, the design of intrinsically safe processes, microreactor and integrated reaction separation technologies, process intensification, waste reduction, new catalytic routes and/or solvent and process optimization.

The Organometallic Chemistry of the Transition Metals Robert H. Crabtree, 2011-09-20 One impressive and comprehensive book. This review would have to be book size to do full justice to all the insights in this volume.

Journal of Metals Online Fully updated and expanded to reflect recent advances, this Fifth Edition of the classic text provides students and professional chemists with a comprehensive introduction to the principles and general properties of organometallic compounds as well as including practical information on reaction mechanisms and detailed descriptions of contemporary applications. With increased focus on organic synthesis applications, nanoparticle science and green chemistry, the Fifth Edition brings this vital resource up to date.

New to the Fifth Edition: Chapters have been updated with relevant examples in the field, modern trends and new applications. The organic applications chapter has been completely rewritten. New end of chapter problems along with their solutions. Coverage enhanced with developments in nanoparticle science. Increased focus on green chemistry. An unparalleled pedagogic resource as well as a valuable working reference for professional chemists with comprehensive coverage and up to date information.

Introduction to Green Chemistry John Andraos, Albert S. Matlack, 2022-03-09 Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluorous biphasic catalysis, metal organic frameworks and process intensification, which were barely mentioned in the First Edition, have become major areas of research. In addition, government funding has ramped up the development of fuel cells and biofuels. This reflects the evolving focus from pollution remediation to pollution prevention. Copiously illustrated with more than 800 figures, the Third Edition provides an update from the frontiers of the field. It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter. Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry.

NEW AND EXPANDED RESEARCH TOPICS: Metal organic frameworks, Metrics, Solid acids for alkylation of isobutene by butanes, Carbon molecular sieves, Mixed micro and mesoporous solids.

Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on an atomic scale UPDATED AND EXPANDED CURRENT EVENTS TOPICS Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Long Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society
