Multiprocessor System Architectures:

Multiprocessor System Architectures Ben J. Catanzaro, 1994 Provides an overview of SPARC architecture including architecture conformance semi conductor technology scalability multiprocessor support as well as system level resources SPARC multi level Bus architectures MBus and XBus multiprocessor system design and simulation and multiprocessor software Geared to engineers and engineering professionals who want to understand the various architectural components both hardware and software from Sun Microsystems

Embedded Software Design and Programming of Multiprocessor System-on-Chip Katalin Popovici, Frédéric Rousseau, Ahmed A. Jerraya, Marilyn Wolf, 2010-03-03 Current multimedia and telecom applications require complex heterogeneous multiprocessor system on chip MPSoC architectures with specific communication infrastructure in order to achieve the required performance Heterogeneous MPSoC includes different types of processing units DSP microcontroller ASIP and different communication schemes fast links non standard memory organization and access Programming an MPSoC requires the generation of efficient software running on MPSoC from a high level environment by using the characteristics of the architecture This task is known to be tedious and error prone because it requires a combination of high level programming environments with low level software design This book gives an overview of concepts related to embedded software design for MPSoC It details a full software design approach allowing systematic high level mapping of software applications on heterogeneous MPSoC This approach is based on gradual refinement of hardware software interfaces and simulation models allowing to validate the software at different abstraction levels This book combines Simulink for high level programming and SystemC for the low level software development This approach is illustrated with multiple examples of application software and MPSoC architectures that can be used for deep understanding of software design for MPSoC

Computer System Architecture P. V. S. RAO, 2008-12-30 Intended as a text for undergraduate and postgraduate students of engineering in Computer Science and Engineering Information Technology and students pursuing courses in computer applications BCA MCA and computer science B Sc M Sc this state of the art study acquaints the students with concepts and implementations in computer architectures Though a new title it is a completely reorganized thoroughly revised and fully updated version of the author s earlier book Perspectives in Computer Architecture The text begins with a brief account of the very early history of computers and describes the von Neumann IAS type of computers then it goes on to give a brief introduction to the subsequent advances in computer systems covering device technologies operational aspects system organization and applications This is followed by an analysis of the advances and innovations that have taken place in these areas Advanced concepts such as look ahead pipelining RISC architectures and multi programming are fully analyzed The text concludes with a discussion on such topical subjects as computer networks microprocessors and microcomputers microprocessor families Intel Pentium series and newer high power processors

HALLMARKS OF THE BOOK The text fully reflects Professor P V S Rao s long experience as an eminent academic and his
