## **Multisensor Surveillance Systems The Fusion Perspective:**

*Multisensor Surveillance Systems* Gian Luca Foresti, Carlo S. Regazzoni, Pramod K. Varshney, 2012-12-06 Monitoring of public and private sites is increasingly becoming a very important and critical issue especially after the recent flurry of terrorist attacks including the one on the World Trade Center in September 2001. It is therefore imperative that effective multisensor surveillance systems be developed to protect the society from similar attacks in the future. The new generation of surveillance systems to be developed have a specific requirement: they must be able to automatically identify criminal and terrorist activity without sacrificing individual privacy to the extent possible. Privacy laws concerning monitoring and surveillance systems vary from country to country but in general they try to protect the privacy of their citizens. Monitoring and visual surveillance has numerous other applications. It can be employed to help invalids or handicapped and to monitor the activities of elderly people. It can be used to monitor large events such as sporting events as well. Nowadays monitoring is employed in several different contexts including transport applications such as monitoring of railway stations and airports, dangerous environments like nuclear facilities or traffic flows on roads and bridges. The latest generation of surveillance systems mainly rely on hybrid analog/digital or completely digital video communications and processing methods and take advantage of the greater flexibility offered by video processing algorithms that are capable of focusing a human operator's attention on a set of interesting situations. , *Innovations in Defence Support Systems* -3 Paolo Remagnino, Dorothy N. Monekosso, Lakhmi C Jain, 2011-02-21 This book is a continuation of our previous volumes on *Innovations in Defence Support Systems*. This book includes a sample of recent advances in intelligent monitoring. The contributions include: Data fusion in modern surveillance; Distributed intelligent surveillance systems modeling for performance evaluation; Incremental learning on trajectory clustering; Pedestrian speed profiles from video sequence; System wide tracking of individuals; A scalable approach based on normality components for intelligent surveillance; Distributed camera overlap estimation; Multi robot team for environmental monitoring. The book is directed to the security experts, engineers, scientists, students and professors who are interested in intelligent monitoring. *Wide Area Surveillance* Vijayan K. Asari, 2013-11-19 The book describes a system for visual surveillance using intelligent cameras. The camera uses robust techniques for detecting and tracking moving objects. The real time capture of the objects is then stored in the database. The tracking data stored in the database is analysed to study the camera view, detect and track objects and study object behavior. These set of models provide a robust framework for coordinating the tracking of objects between overlapping and non overlapping cameras and recording the activity of objects detected by the system. **User-Centric Technologies and Applications** José Manuel Molina López, José Ramón Casar Corredra, Manuel Felipe Cátedra Pérez, Javier Ortega-García, Ana M. Bernardos Barbolla, 2011-03-09 Context is defined as any information that can be used to characterize the situation of an entity. Nowadays the increasing availability of communication networks, the miniaturization and progressive reduction in the cost of

sensors and the penetration of advanced mobile personal devices make possible to collect and process data from multiple sources and combine them in order to automatically infer knowledge about the user's situation. Thus the CONTEXTS Workshop aims at gathering advances on key elements that enable the design and deployment of personalized ubiquitous context aware services and natural non intrusive methods for interaction. The Workshop is organized and funded by the CONTEXTS Programme one of the largest cooperative research initiatives in Madrid with the participation of institutions from all over Spain and with the support of international experts. The CONTEXTS Programme focuses on advancing the key elements in frontier communications and location technologies, data processing and multisensor fusion and paradigms for intelligent adaptive management which make feasible the development of advanced personalized applications for ambient intelligence. *Genetic and Evolutionary Computation for Image Processing and Analysis* Stefano Cagnoni, 2008

*Relational Calculus for Actionable Knowledge* Michel Barès, Éloi Bossé, 2022-01-21 This book focuses on one of the major challenges of the newly created scientific domain known as data science: turning data into actionable knowledge in order to exploit increasing data volumes and deal with their inherent complexity. Actionable knowledge has been qualitatively and intensively studied in management, business and the social sciences but in computer science and engineering its connection has only recently been established to data mining and its evolution. Knowledge Discovery and Data Mining (KDD) Data mining seeks to extract interesting patterns from data but until now the patterns discovered from data have not always been actionable for decision makers in Socio Technical Organizations (STOs). With the evolution of the Internet and connectivity STOs have evolved into Cyber Physical and Social Systems (CPSS) that are known to describe our world today. In such complex and dynamic environments the conventional KDD process is insufficient and additional processes are required to transform complex data into actionable knowledge. Readers are presented with advanced knowledge concepts and the analytics and information fusion (AIF) processes aimed at delivering actionable knowledge. The authors provide an understanding of the concept of relation and its exploitation, relational calculus as well as the formalization of specific dimensions of knowledge that achieve a semantic growth along the AIF processes. This book serves as an important technical presentation of relational calculus and its application to processing chains in order to generate actionable knowledge. It is ideal for graduate students, researchers or industry professionals interested in decision science and knowledge engineering. **Brain and Health**

**Informatics** Kazuyuki Imamura, Shiro Usui, Tomoaki Shirao, Takuji Kasamatsu, Lars Schwabe, Ning Zhong, 2013-10-24 This book constitutes the refereed proceedings of the International Conference on Brain and Health Informatics (BHI 2013) held in Maebashi, Japan in October 2013. The 33 revised full papers presented together with 8 workshop papers and 12 special session papers were carefully reviewed and selected for inclusion in the book. The papers are organized in topical sections on thinking and perception, centric investigations of human information processing systems, information technologies for curating, mining, managing and using big brain health data, information technologies for healthcare data analytics, data mining and

machine learning and applications The topics of the workshop papers are mental health with ICT and granular knowledge discovery in biomedical and active media environments and the topics of the special sessions are human centered computing neuro robotics and intelligent healthcare data analytics

**Cyber Security Solutions for Protecting and Building the Future Smart Grid** Divya Asija,R K Viral,Resul Daş,Gürkan Tuna,2024-10-08 Cyber Security Solutions for Protecting and Building the Future Smart Grid guides the reader from the fundamentals of grid security to practical techniques necessary for grid defense Through its triple structure readers can expect pragmatic detailed recommendations on the design of solutions and real world problems The book begins with a supportive grounding in the security needs and challenges of renewable integrated modern grids Next industry professionals provide a wide range of case studies and examples for practical implementation Finally cutting edge researchers and industry practitioners guide readers through regulatory requirements and develop a clear framework for identifying best practices Providing a unique blend of theory and practice this comprehensive resource will help readers safeguard the sustainable grids of the future Provides a fundamental overview of the challenges facing the renewable integrated electric grid Offers a wide range of case studies examples and practical techniques for implementing security in smart and micro grids Includes detailed guidance and discussion of international standards and regulations for industry and implementation
