Multivariate Applications In Substance Use Research:

Multivariate Applications in Substance Use Research Jennifer S. Rose,Laurie Chassin,Clark C. Presson,Steven J. Sherman,2000-01-01 This edited volume introduces the latest advances in quantitative methods and illustrates ways to apply these methods to important questions in substance use research The goal is to provide a forum for dialogue between methodologists developing innovative multivariate statistical methods and substance use researchers who have produced rich data sets Reflecting current research trends the book examines the use of longitudinal techniques to measure processes of change over time Researchers faced with the task of studying the causes course treatment and prevention of substance use and abuse will find this volume helpful for applying these techniques to make optimal use of their data This innovative volume introduces the use of latent curve methods for describing individual trajectories of adolescent substance use over time explores methods for analyzing longitudinal data for individuals nested within groups such as families classrooms and treatment groups demonstrates how different patterns of missing data influence the interpretation of results reports on some recent advances in longitudinal growth modeling illustrates methods to assess mediation when there are multiple mediating pathways underlying an intervention effect describes methods to identify moderating relations in structural equation models demonstrates the use of structural equation models to evaluate a preventive intervention applies epidemic modeling techniques to understand the spread of substance use in society illustrates the use of latent transition analysis to model substance use as a series of stages and applies logistic regression to prospectively predict smoking cessation

Applied Data Analytic Techniques For Turning Points Research Patricia Cohen,2012-10-12 This innovative volume demonstrates the use of a range of statistical approaches that examine turning points a change in direction magnitude or meaning in real data Analytic techniques are illustrated with real longitudinal data from a variety of fields As such the book will appeal to a variety of researchers including Developmental researchers interested in identifying factors precipitating turning points at various life stages Medical or substance abuse researchers looking for turning points in disease or recovery Social researchers interested in estimating the effects of life experiences on subsequent behavioral changes Interpersonal behavior researchers looking to identify turning points in relationships Brain researchers needing to discriminate the onset of an experimentally produced process in a participant The book opens with the goals and theoretical considerations in defining turning points An overview of the methods presented in subsequent chapters is then provided Chapter goals include discriminating local from long term effects identifying variables altering the connection between trajectories at different life stages locating non normative turning points coping with practical distributional problems in trajectory analyses and changes in the meaning and connections between variables in the transition to adulthood From an applied perspective the book explores such topics as antisocial aggressive trajectories at different life stages the impact of imprisonment on criminal behavior family contact trajectories in the transition to adulthood sustained effects of substance abuse alternative models of bereavement and

identifying brain changes associated with the onset of a new brain process Ideal for advanced students and researchers interested in identifying significant change in data in a variety of fields including psychology medicine education political science criminology and sociology **Longitudinal Analysis** Lesa Hoffman,2015-01-30 Longitudinal Analysis provides an accessible application oriented treatment of introductory and advanced linear models for within person fluctuation and change Organized by research design and data type the text uses in depth examples to provide a complete description of the model building process The core longitudinal models and their extensions are presented within a multilevel modeling framework paying careful attention to the modeling concerns that are unique to longitudinal data Written in a conversational style the text provides verbal and visual interpretation of model equations to aid in their translation to empirical research results Overviews and summaries boldfaced key terms and review questions will help readers synthesize the key concepts in each chapter Written for non mathematically oriented readers this text features A description of the data manipulation steps required prior to model estimation so readers can more easily apply the steps to their own data An emphasis on how the terminology interpretation and estimation of familiar general linear models relates to those of more complex models for longitudinal data Integrated model comparisons effect sizes and statistical inference in each example to strengthen readers understanding of the overall model building process Sample results sections for each example to provide useful templates for published reports Examples using both real and simulated data in the text along with syntax and output for SPSS SAS STATA and Mplus at www.PilesOfVariance.com to help readers apply the models to their own data The book opens with the building blocks of longitudinal analysis general ideas the general linear model for between person analysis and between and within person models for the variance and the options within repeated measures analysis of variance Section 2 introduces unconditional longitudinal models including alternative covariance structure models to describe within person fluctuation over time and random effects models for within person change Conditional longitudinal models are presented in section 3 including both time invariant and time varying predictors Section 4 reviews advanced applications including alternative metrics of time in accelerated longitudinal designs three level models for multiple dimensions of within person time the analysis of individuals in groups over time and repeated measures designs not involving time The book concludes with additional considerations and future directions including an overview of sample size planning and other model extensions for non normal outcomes and intensive longitudinal data Class tested at the University of Nebraska Lincoln and in intensive summer workshops this is an ideal text for graduate level courses on longitudinal analysis or general multilevel modeling taught in psychology human development and family studies education business and other behavioral social and health sciences The book's accessible approach will also help those trying to learn on their own Only familiarity with general linear models regression analysis of variance is needed for this text **Higher-Order Growth Curves and Mixture Modeling with Mplus** Kandauda Wickrama,Tae Kyoung Lee,Catherine Walker O'Neal, Frederick Lorenz,2021-11-23 This practical

introduction to second order and growth mixture models using Mplus introduces simple and complex techniques through incremental steps. The authors extend latent growth curves to second order growth curve and mixture models and then combine the two using normal and non normal e.g. categorical data. To maximize understanding each model is presented with basic structural equations figures with associated syntax that highlight what the statistics mean. Mplus applications and an interpretation of results. Examples from a variety of disciplines demonstrate the use of the models and exercises allow readers to test their understanding of the techniques. A comprehensive introduction to confirmatory factor analysis, latent growth curve modeling and growth mixture modeling is provided so the book can be used by readers of various skill levels. The book's datasets are available on the web. New to this edition Two new chapters providing a stepwise introduction and practical guide to the application of second order growth curves and mixture models with categorical outcomes using the Mplus program. Complete with exercises, answer keys and downloadable data files. Updated illustrative examples using Mplus 8.0 include conceptual figures, Mplus program syntax and an interpretation of results to show readers how to carry out the analyses with actual data. This text is ideal for use in graduate courses or workshops on advanced structural equation multilevel longitudinal or latent variable modeling, latent growth curve and mixture modeling, factor analysis, multivariate statistics or advanced quantitative techniques methods across the social and behavioral sciences.

[Handbook of Drug Abuse Prevention](#) Zili Sloboda, William J. Bukoski, 2007-08-06. There are a number of reasons why this book is important. First there is no one source that summarizes what we know about the prevention of substance abuse from the research field so the book serves as a repository of accumulated knowledge on prevention theory, intervention design and development and prevention research methodology. Second as an evolving field prevention science has only begun to assert itself in both the arenas of practice and policy. The formation of the Society for Prevention Research in 1991 was the first recognition that a science of prevention existed and required a separate forum to present the rapidly growing content of the field for discussion and review. Finally there is a need to establish a baseline a reference point against which progress in the field of prevention science can be assessed. This book serves all of these purposes. The idea for this book grew from the observation in the early 1990s that after decades of attempts to develop effective interventions to prevent drug use among children and adolescents in the United States that we were finally having success particularly in addressing the initiation of use. These successes are the result of research that has provided a better understanding of the factors and processes associated with the onset of substance use.

M. E. Engels,Margaret Kerr,Håkan Stattin,2007-02-27 Everyone agrees that peers are important in adolescence There have been some advances in research on adolescent peer relationships and this volume presents four key areas of these innovative studies Firstly the discovery of a deviancy training mechanism of peer influence is examined in which antisocial pairs have been observed to reward each other with approval for deviant or antisocial talk and this has been linked to escalations in antisocial behaviour The second area is the study of romantic partners as important peer relationships in adolescence The text then looks at the application of behavioural genetic analytical techniques to understand peer selection and influence processes This line of research will also shed a new light on social environmental influences on adolescent problem behaviours The final area covers the use of designs that capture both in school and out of school peers in order to understand their relative influence on problem behaviour
