Investigations on Multi-Sensor Image System and Its Surveillance Applications Zheng Liu,2010-08 This thesis investigates the issues of implementing multi sensor imaging system for surveillance applications Three topics for the fusion

of infrared and electro optic images are studied i e registration fusion and evaluation The first topic is the image registration or alignment which is to associate corresponding pixels in multiple images to the same physical point in the scene A trajectory based method for registering infrared and electro optic video sequences is proposed in this study The initial registration parameters are derived from matching the trajectories across the consecutive video frames Further refinement can be carried out by applying a maximum mutual information approach The frame difference from which the feature point is detected is found with an image structural similarity measurement The second topic is the implementation of pixel level fusion Two applications are considered in this study Motivated by the adaptive enhancement a modified pixel level fusion scheme is proposed to implement the context enhancement A visual image is first enhanced with the corresponding infrared image Then the enhanced image is fused with the visual image again to highlight the background features This achieves a context enhancement most suitable for human perception As the application of multi sensor concealed weapon detection CWD is concerned this thesis clarifies the requirements and concepts for CWD How the CWD application can benefit from multi sensor fusion is identified and a framework of multi sensor CWD is proposed A solution to synthesize a composite image from infrared and visual image is presented with experimental results The synthesized image on one hand provides both the information of personal identification and the suspicious region of concealed weapons on the other hand implements the privacy protection which appears to be an important aspect of the CWD process The third topic is about the fusion performance assessment In this study the evaluation metrics are developed for reference based assessment and blind assessment respectively An absolute measurement of image features namely phase congruency is employed Future work should include the reliability and optimization study of multiple image sensors from applications and human perception related perspectives This thesis is a contribution to such research

Pixel-level Image Fusion Algorithms for Multi-camera Imaging System Sicong Zheng,2010 This thesis work is motivated by the potential and promise of image fusion technologies in the multi sensor image fusion system and applications With specific focus on pixel level image fusion the process after the image registration is processed we develop graphic user interface for multi sensor image fusion software using Microsoft visual studio and Microsoft Foundation Class library In this thesis we proposed and presented some image fusion algorithms with low computational cost based upon spatial mixture analysis The segment weighted average image fusion combines several low spatial resolution data source from different sensors to create high resolution and large size of fused image This research includes developing a segment based step based upon stepwise divide and combine process In the second stage of the process the linear interpolation optimization is used to sharpen the image resolution Implementation of these image fusion algorithms are completed based on the graphic user interface we developed Multiple sensor image fusion is easily accommodated by the algorithm and the results are demonstrated at multiple scales By using quantitative estimation such as mutual information we obtain the experiment quantifiable results We also use the image morphing technique to generate fused image sequence to simulate the results of image fusion While deploying our pixel level image fusion algorithm approaches we observe several challenges from the popular image fusion methods While high computational cost and complex processing steps of image fusion algorithms provide accurate fused results they also makes it hard to become deployed in system and applications that require real time feedback high flexibility and low computation ability *International Conference on Image Processing and Its Applications* ,1997 **Data Mining and Applications** Deren Li,2001 **Remote Sensing for Environmental Monitoring, GIS Applications, and Geology** ,2003
