Integrated Design of Multiscale, Multifunctional Materials and Products David L. McDowell, Jitesh Panchal, Hae-Jin Choi, Carolyn Seepersad, Janet Allen, Farrokh Mistree, 2009-09-30 Integrated Design of Multiscale Multifunctional Materials and Products is the first of its type to consider not only design of materials but concurrent design of materials and products In other words materials are not just selected on the basis of properties but the composition and or microstructure is designed to satisfy specific targeted sets of performance requirements This book presents the motivation for pursuing concurrent design of materials and products thoroughly discussing the details of multiscale modeling and multilevel robust design and provides details of the design methods strategies along with selected examples of designing material attributes for specified system performance It is intended as a monograph to serve as a foundational reference for instructors of courses at the senior and introductory graduate level in departments of materials science and engineering mechanical engineering aerospace engineering and civil engineering who are interested in next generation systems based design of materials First of its kind to consider not only design of materials but concurrent design of materials and products Treatment of uncertainty via robust design of materials Integrates the materials by design approach of Olson Ques Tek LLC with the materials selection approach of Ashby Granta Distinguishes the processes of concurrent design of materials and products as an overall systems design problem from the field of multiscale modeling Systematic mathematical algorithms and methods are introduced for robust design of materials rather than ad hoc heuristics it is oriented towards a true systems approach to design of materials and products

Mesoscopic Phenomena in Multifunctional Materials Avadh Saxena, Antoni Planes, 2014-07-17 A highly coveted objective of modern materials science is to optimize multiple coupled functionalities in the same single phase material and control the cross response via multiple external fields One important example of such multi functionality are multiferroic materials where two or more ferroic properties are intrinsically coupled They include among others the magneto electric and magneto structural materials which are well understood at the nano and continuum length and time scales The next emerging frontier is to connect these two limiting scales by probing the mesoscale physics of these materials This book not only attempts to provide this connection but also presents the state of the art of the present understanding and potential applications of many related complex multifunctional materials The main emphasis is on the multiscale bridging of their properties with the aim to discover novel properties and applications in the context of materials by design This interdisciplinary book serves both graduate students and expert researchers alike
