- **What is it?**

- Example: Picture in picture, words in words
- It is “Steganography”
- Secondary information in perceptual digital media data

- **Why hide information?**

- Convey information without an additional channel
- Hidden data is tied to content: Can be made difficult to separate data from content.
- Covert communication: Adversary does not know it is there!

**Multimedia Data Hiding** Min Wu,Bede Liu,2013-03-19 The digital information revolution has brought about profound changes in our society and our life New devices and powerful software have made it possible for consumers worldwide to create manipulate share and enjoy the multimedia information Internet and wireless networks offer ubiquitous channels to deliver and to exchange multimedia information for such purposes as remote collaboration distant learning and entertainment With all these advances in multimedia coding and communication technologies over the past decade the major hurdle for allowing much broader access of multimedia assets and deployment of multimedia services no longer lies with bandwidth related issues but with how to make sure that content is used for its intended purpose by its intended recipients The core issue then becomes the development of secure management of content usage and delivery across communication networks Data hiding and digital watermarking are promising new technologies for multimedia information protection and

rights management Secondary data can be embedded imperceptibly in digital multimedia signals for a variety of applications including ownership protection authentication access control and annotation Data hiding can also be used to send side information in multimedia communication for providing additional functionalities or for enhancing performance The extraction of the embedded data may not need knowledge of the original host media data In addition to imperceptibility robustness against moderate processing such as compression is also an important consideration

**Multimedia Information Hiding Technologies and Methodologies for Controlling Data** Kondo, Kazuhiro, 2012-10-31 The widespread use of high speed networks has made the global distribution of digital media contents readily available in an instant As a result data hiding was created in an attempt to control the distribution of these copies by verifying or tracking the media signals picked up from copyright information such as the author or distributor ID Multimedia Information Hiding Technologies and Methodologies for Controlling Data presents the latest methods and research results in the emerging field of Multimedia Information Hiding MIH This comprehensive collection is beneficial to all researchers and engineers working globally in this field and aims to inspire new graduate level students as they explore this promising field

**Data Hiding Fundamentals and Applications** Husrev T. Sencar, Mahalingam Ramkumar, Ali N. Akansu, 2004-08-20 Multimedia technologies are becoming more sophisticated enabling the Internet to accommodate a rapidly growing audience with a full range of services and efficient delivery methods Although the Internet now puts communication education commerce and socialization at our finger tips its rapid growth has raised some weighty security concerns with respect to multimedia content The owners of this content face enormous challenges in safeguarding their intellectual property while still exploiting the Internet as an important resource for commerce Data Hiding Fundamentals and Applications focuses on the theory and state of the art applications of content security and data hiding in digital multimedia One of the pillars of content security solutions is the imperceptible insertion of information into multimedia data for security purposes the idea is that this inserted information will allow detection of unauthorized usage Provides a theoretical framework for data hiding in a signal processing context Realistic applications in secure multimedia delivery Compression robust data hiding Data hiding for proof of ownership WATERMARKING Data hiding algorithms for image and video watermarking *Multimedia Data Hiding* Kaushal M. Solanki, 2005 The rapid growth in the demand and consumption of the digital multimedia content in the past decade has led to some valid concerns over issues such as content security authenticity and digital rights management Multimedia data hiding defined as imperceptible embedding of information into a multimedia host provides potential solutions but with many technological challenges In this thesis we address several fundamental issues in this field which provide the framework for the design of practical techniques that can seamlessly be deployed in real world applications

**Multimedia Data Hiding** Min Wu,Bede Liu,2014-01-15 *Data Hiding in Multimedia - Theory and Applications* Mahalingam Ramkumar,2000 Multimedia data hiding or steganography is a means of communication using subliminal channels The resource for the subliminal communication scheme is the distortion of the original content that can be tolerated This thesis addresses two main issues of steganographic communication schemes 1 How does one maximize the distortion introduced without affecting fidelity of the content 2 How does one efficiently utilize the resource the distortion introduced for communicating as many bits of information as possible In other words what is a good signaling strategy for the subliminal communication scheme Close to optimal solutions for both issues are analyzed Many techniques for the issue for maximizing the resource viz the distortion introduced imperceptibly in images and video frames are proposed Different signaling strategies for steganographic communication are explored and a novel signaling technique employing a floating signal constellation is proposed Algorithms for optimal choices of the parameters of the signaling technique are presented Other application specific issues like the type of robustness needed are taken into consideration along with the established theoretical background to design optimal data hiding schemes In particular two very important applications of data hiding are addressed data hiding for multimedia content delivery and data hiding for

watermarking for proving ownership A robust watermarking protocol for unambiguous resolution of ownership is proposed
