Abstract The purpose of this study was to examine the effects of a 12-week, low-intensity, low-impact, and low-volume exercise program on the physical and psychological health of older adults. The study was a randomized controlled trial involving 60 participants aged 65 and older. The intervention group performed a 12-week program of low-intensity, low-impact, and low-volume exercise, while the control group remained sedentary. The primary outcome was the change in physical health, measured by the Physical Function subscale of the SF-36. The secondary outcome was the change in psychological health, measured by the Mental Health subscale of the SF-36. The results showed that the intervention group had a significant improvement in physical health compared to the control group. There was no significant difference in psychological health between the two groups. The findings suggest that a 12-week, low-intensity, low-impact, and low-volume exercise program can improve physical health in older adults.

Introduction Imagine a virtual world with digital creatures that looks like real life sounds like real life and even feels like real

life Imagine a virtual world not only with nice three dimensional graphics and animations but also with realistic physical laws and forces This virtual world could be familiar reproducing some parts of our reality or unfamiliar with strange physical laws and artificial life forms As a researcher interested in the sciences of complexity the idea of a conference about virtual worlds emerged from frustration In the last few years there has been an increasing interest in the design of artificial environments using image synthesis and virtual reality The emergence of industry standards such as VRML 1 is an illustration of this growing interest At the same time the field of Artificial Life has addressed and modeled complex phenomena such as self organization reproduction development and evolution of artificial life like systems 2 One of the most popular works in this field has been Tierra designed by Tom Ray an environment producing synthetic organisms based on a computer metaphor of organic life in which CPU time is the energy resource and memory is the material resource 3 Memory is organized into informational patterns that exploit CPU time for self replication Mutation generates new forms and evolution proceeds by natural selection as different creatures compete for CPU time and memory space
