It provides theoretical and empirical evidence demonstrating the role of motivation in self-regulated learning and discusses detailed applications of the principles of motivation and self-regulation in educational contexts. Each chapter includes a description of the motivational variables, the theoretical rationale for their importance, research evidence to support their role in self-regulation, suggestions for ways to incorporate motivational variables into learning contexts to foster self-regulatory skill development and achievement outcomes.

Language Learning Strategies. The Process of Becoming a Self-Regulated Learner in a Foreign Language Class Elisabeth Grasi, 2020-09-30 Seminar paper from the year 2019 in the subject Didactics for the subject English Pedagogy Literature Studies grade 2 University of Applied Sciences Burgenland language English abstract. The paper's primary concern is to outline strategies which teachers could use in order to support students in becoming self-regulated by using language learning strategies. Maria Montessori was one of the first pedagogues who emphasized independence, a degree of student autonomy, and learning strategies that highlight learning through action rather than lecture. Children have been seen as naturally eager for knowledge. Thus, children are capable of initiating learning in a supportive, thoughtfully prepared learning environment. Based on pedagogical observations, it was discovered that children who were free to choose and act without restrictions within an environment prepared according to Montessori's model would act spontaneously for optimal development. Unfortunately, it is frequently observable that modern phenomena such as portable phones, computers, and television are a constant distraction even for young children and consequently tend to impede the students' learning of self-regulation.
