

MS pathophysiology :

- T cells gain entry into the brain via disruption in the BBB
- T cells recognize myelin as foreign and attack it
- attack of Myelin start inflammatory processes which release Cytokines and antibodies which interact macrophages
- B cells make antibodies that mark the myelin .& macrophages will use these antibodies to engulf the oligodendrocytes and the myelin.

Multiple Sclerosis Immunology Pathology Pathophysiology:

Multiple Sclerosis Robert M Herndon, MD,2002-12-01 Knowledge has been described as being like an expanding sphere with the volume of knowledge contacting a surface on the unknown This new comprehensive review of the many fields of basic and clinical research that impact our understanding of multiple sclerosis has its basis in this premise In doing research on MS it is not enough to know clinical neurology or neurochemistry or neuroanatomy or pathology it is important to understand the many other areas that relate to them This volume provides an overview of MS related research and will benefit many investigators in the field and help to advance our efforts to cure this thus far intractable disease It is now more than 160 years since the first clinical pathological descriptions of cases of multiple sclerosis and more than 130 years since the classic clinical description and development of diagnostic criteria by Charcot yet MS remains an enigma After decades of intense effort to find the cause no cause has been clearly identified and the disease remains poorly understood Despite the introduction of immunomodulatory therapies and immunosuppressive regimens MS remains a devastating disease While a great deal of progress has been made much remains to be done Our understanding of the disease remains limited treatments remain inadequate and comprehensive management all too rare This volume is an overview of the basic sciences as they relate to MS and will provide clinicians and investigators a better understanding of the basic aspects of the disease While it is possible to find excellent reviews of almost any aspect of MS few attempts have been made to bring these very different aspects together in a single source This volume is a companion to Multiple Sclerosis Diagnosis Medical Management and Rehabilitation edited by Drs Jack S Burks and Kenneth P Johnson Together they represent an attempt to comprehensively cover the field of MS from basic research to comprehensive management and to provide a broad overview for those interested in understanding the disease better or in pursuing MS research

23/03/2024 Francisco Javier Quintana,2024-06-11 Mechanisms of Disease Pathogenesis in Multiple Sclerosis summarizes our current understanding on MS and its clinical features and monitoring with available biomarkers focusing on mechanisms that drive disease pathogenesis and their control by genetic environmental factors and novel therapies for disease management The book is written for neurologists neuroimmunologists and clinical translational and basic researchers interested in mechanisms of neurodegeneration Multiple Sclerosis MS is an autoimmune disease which targets the central nervous system CNS It is the most common cause of non traumatic neurological disability in young adults with a prevalence of 1 in 1000 and increasing hence the importance of this book Summarizes our current understanding of Multiple Sclerosis Discusses clinical features and available biomarker monitoring Focuses on mechanisms that drive disease pathogenesis

La Flamme,Jacqueline Monique Orian,2015-10-07 Over the past decade we have made great advances in the field of

multiple sclerosis MS research and this book focuses on those advances in MS pathogenesis and treatment While some of these advances have been through new approaches and ideas that have emerged in the last decade such as the newly identified protective role that amyloid proteins may play in MS or the use of helminths to treat autoimmune diseases others have evolved from previous theories and ideas that have only now gained momentum and a deeper understanding such as the role of HLA or gender in MS susceptibility This book covers these emerging and evolving topics and highlights the substantial advancements made in elucidation of the factors regulating susceptibility or disease progression identification of new ways to monitor or predict MS pathology and development of new strategies for treating MS **Multiple Sclerosis** Alireza Minagar,2015-11-09 Multiple Sclerosis A Mechanistic View provides a unique view of the pathophysiology of multiple sclerosis MS and related disorders As the only book on the market to focus on the mechanisms of MS rather than focusing on the clinical features and treatment of the disease it describes the role of genetic and environmental factors in the pathogenesis of MS the role of specific cells in the pathophysiology of the disease and the pathophysiology of inflammatory and neurodegenerative disorders related to MS The book provides discussion of neurodegeneration and neuroregeneration two critical emerging areas of research as well as detailed discussion of the mechanisms of action of the approved and investigational drugs for treatment of MS and the emerging role of magnetic resonance spectroscopy MRI in investigations into MS It is the only book on the market to offer comprehensive coverage of the known mechanisms of MS and related diseases and contains contributions from physicians and researchers who are worldwide experts in the field of study Focuses on the pathophysiologic mechanisms of multiple sclerosis and the mechanisms of action in agents for the treatment of MS Discusses the roles of neurodegeneration and neuroregeneration in MS and related diseases Authored and edited by international leaders in the field of MS research **Multiple Sclerosis** Michael J. Olek,2005 A synthesis of current concepts about the evaluation treatment and future directions in MS On the evaluation side the authors review the use of MRI magnetic resonance spectroscopy functional MRI and three dimensional MRI and consider the rapidly developing body of pathologic information they have yielded On the treatment side the focus is on recently approved medications Novantrone new indications for medications CHAMPS Trial medications in development Oral Interferon Tau Oral Copaxone and Oral Cellcept immunosuppressive therapy for both progressive disease and symptomatic therapy the current medications for treating relapsing remitting MS Avonex Betaseron and Copaxone are also discussed For future directions the authors present the current best thinking as well as the latest discoveries in immunology relating to MS including groundbreaking B cell research and its applications to specific immunotherapies and the use of immune markers for tracking the disease **Molecular Modulators of Experimental Autoimmune Encephalomyelitis** Emily K. Vitale,2002 This work provides the practicing ophthalmologist with a

comprehensive volume that presents both immunologic fundamentals as they relate to uveitis and the practical approach to the treatment of these diseases Dr Foster is the leader in the aggressive medical management of ocular inflammatory diseases and the book reflects twenty five years of experience in the world's busiest uveitis clinic. Featuring contributions from 60 international specialists the book provides encyclopedic coverage of basic science diagnosis and clinical management as well as thorough discussion of ocular inflammatory diseases in all regions of the world. The book is complete dealing with basic science diagnosis and clinical management of ocular inflammatory diseases. Dr Foster's focus on aggressive treatment therapies as well as his twenty five years of experience at the Massachusetts Eye Ear Infirmary makes him a true leader in the field.

Manu Rangachari,Nathalie Arbour,Steven M Kerfoot,Jorge I Alvarez,2017-10-10 Multiple sclerosis is degenerative disease of the central nervous system CNS in which myelin destruction and axon loss leads to the accumulation of physical cognitive and mental deficits MS affects more than a million people worldwide and managing this chronic disease presents a significant health challenge Multiple lines of evidence indicate that MS is an autoimmune disorder in which immune cells launch an inflammatory attack targeting myelin antigens Indeed myelin reactive T cells and antibodies have been identified in MS patients and in animal models namely experimental autoimmune encephalomyelitis or EAE that recapitulate many features of human disease Animal model studies have demonstrated that T cells are both necessary and sufficient to initiate and sustain CNS autoimmunity However most MS animal models rely on the role played by CD4 T cells and partially replicate the multiple aspects of MS pathogenesis Thus research in the past has focused heavily on the contribution of CD4 T cells to the disease process searching PubMed for MS AND CD4 yields twice the results as corresponding searches for CD8 or B cell and four times that for NK cells While CD4 T cells may represent the minimum requirement to mediate CNS autoimmunity it is clear that the immune response underlying human MS is far more complex and involves numerous other immune cells and subsets This is well illustrated by the observation that MS patients treated with an anti CD4 depleting antibody did not gain any clinical benefits whereas removal of several lymphocyte subsets using an anti CD52 depleting antibody has been shown to impede disease progression In particular the pathogenic role s of non CD4 T cell lymphocytes is relatively poorly understood and under researched despite evidence that these subsets contribute to disease pathology or regulation For example the observed oligoclonal expansion of CD8 T cells within the CNS compartment supports a local activation CD8 T cells with polarized cytolytic granules are seen in close proximity to oligodendrocytes and demyelinated axons in MS tissues The presence of B cells in inflammatory lesions and antibodies in the CSF have long been recognized as features of MS and Rituximab a B cell depleting therapy has been shown to be highly effective to treat MS Intriguingly the putative MS therapeutic reagent Daclizumab may function in part through the expansion of a subset of immunoregulatory NK cells NKT and T cells may also play a role in CNS autoimmunity given that they respond to lipid antigens and that myelin is lipid rich While different animal models recapitulate some of these aspects of human disease identifying appropriate models and measures to investigate the role of these less well understood lymphocytes in MS remains a challenge for the field This Frontiers research topic aims to create a platform for both animal and human focused researchers to share their original data hypotheses future perspectives and commentaries regarding the role of these less well understood lymphocyte subsets CD8 T cells B cells NK cells NK T cells T cells in the pathogenesis of CNS autoimmunity Neuroimmunology Research Perspectives Lilian M. aspects of the interactions between the immune system and nervous system It deals with among other things the physiological functioning of the neuroimmune system in states of both health and disease malfunctions of the neuroimmune system in disorders autoimmune diseases hypersensitivities immune deficiency the physical chemical and physiological characteristics of the components of the neuroimmune system in vitro in situ and in vivo Despite the brain's status as an immune privileged site an extensive bi directional communication takes place between the nervous and the immune system in both health and disease Immune cells and neuroimmune molecules such as cytokines chemokines and growth factors modulate brain function through multiple signalling pathways throughout the lifespan Immunological physiological and psychological stressors engage cytokines and other immune molecules as mediators of interactions with neuroendocrine neuropeptide and neurotransmitter systems For example brain cytokine levels increase following stress exposure while treatments designed to alleviate stress reverse this effect This book presents leading research from around the globe
