mechanical Students typically find it boring Why not learn one pattern for the entire table Discovering patterns is active creative and engaging The essence of mathematics is patterns Learning to recognize patterns at an early age develops analytical skills Patterns greatly benefit children with special needs such as those with ADD ADHD autism and dyslexia They can better recall and visualize the table when they see a pattern This is true for all children Patterns aid recall My workbook utilizes both left and right brain strategies to teach multiplication There are marked differences between children who are left hemisphere dominant and those who are right dominant Whereas the left hemisphere dominant child can construct the whole from the parts the right dominant prefers the big picture seeing patterns and making connections Special needs children are often right brain dominant Learning the multiplication tables is much easier when both hemispheres are engaged It is the responsibility of parents and teachers to ensure children learn the multiplication tables Without them a child will not progress beyond third grade math Fractions decimals percentages and algebra will be beyond a child's reach In California the number one reason students do not graduate from high school is failure to pass algebra A leading cause is failure to master the times tables It is a national disgrace that fifteen year olds in the U S rank near the bottom of industrialized nations in math skills We must reverse this alarming trend The time to intervene is in the third grade Teachers why not a more effective approach to the multiplication tables than the drill and kill of rote memorization Why not bring the magic of math into the classroom If all third graders were to genuinely like math they would be more likely to succeed in school Parents too must do their part Parents have a huge influence over a third grader By high school it may be too late Mastery of the multiplication tables is essential to your child's future The goal of this workbook is not only multiplication mastery for all children but to instill in them a love of numbers and fascination with math Free instructional TeaChildMath tm videos can be found on YouTube
