MULTI-SITE EVALUATIONS

Multisite Evaluations

Multisite Evaluations:

Multisite Evaluations Robin S. Turpin, James M. Sinacore, James Michael Sinacore, 1991 Multisite evaluations are conducted for many reasons to increase the option to generalize findings to maximize sample size and to respond to political and social demands. However, the conduct of these evaluations requires careful consideration. The papers in this volume are intended to provide information to evaluators on some of the advantages and limitations and on the organizational, methodological, and statistical issues implicit in this type of evaluation.

Multisite Evaluation Practice: Lessons and Reflections From Four Cases Frances Lawrenz, 2011-04-19 Multisite evaluation settings differ from the single settings common to research on evaluation use. In addition to the primary intended users, there is another important group of potential evaluation users in settings where government agencies or large national or international foundations fund multisite projects: project leaders and local evaluators. If each project site is expected to take part in or support the overall program evaluation, then these individuals frequently serve as links between their projects and the larger cross-project evaluation of the funded program. The field has not until now addressed the topic of how being asked or required to participate in such evaluations affects these people who play a critical role in multisite evaluations. This issue does so in two ways. The first six chapters present data and related analyses from research on four multisite evaluations documenting the patterns of involvement in these evaluation projects and the extent to which different levels of involvement in program evaluations resulted in different patterns of evaluation use and influence. The remaining chapters offer reflections on the results of the cases or their implications, some by people who were part of the original research and some by those who were not. The goal is to encourage readers to think actively about ways to improve multisite evaluation practice. This is the 129th volume of the Jossey-Bass quarterly report series *New Directions for Evaluation*, an official publication of the American Evaluation Association.

Conducting Multiple Site Evaluations in Real-World Settings James M. Herrell, 2002-07-22 In the past decade, interest in multisite evaluation has grown, but there is still not a substantial literature on the issues involved in conducting evaluations in multiple sites. There are, however, a number of threads that readers may be interested in pursuing. The literature on clinical trials increasingly contains references to conducting multicenter clinical trials. Cluster evaluation is an approach to multisite evaluation that has been developed by the W.K. Kellogg Foundation for improving the evaluation of certain foundation initiatives. The studies described in this volume represent an approach to multisite evaluation that has much in common with the clinical trials tradition. However, it shares with cluster evaluation an appreciation for the adjustments that are necessary to reflect the realities of conducting evaluation research in actual service settings. This is the 94th issue of the quarterly report *New Directions for Evaluation*.
