Childhood cancer was almost always fatal before 1970 Today 80% of children diagnosed with cancer will survive at least 5 years 70% will be cured However cancer continues to be the leading cause of nonaccident related deaths in children More children die each year from cancer than from c tic brosis diabetes asthma AIDS and congenital abnormalities combined Nine children die from cancer every school day Despite the fact that pediatric cancers account for only a small percentage of the total cancer burden more effective therapies are needed to improve mortality rates in children Therefore our research priority must be the development of new agents and new therapies for childhood cancer M D Anderson Cancer Center has been caring for children with cancer since its doors opened over 60 years ago This institution has been home to several research and clinical pioneers whose innovative work has influenced and shaped the practice of pediatric oncology throughout the world Notably Drs Wataru W Sutow Donald Pinkel and Norman Jaffe have been credited with introducing curative therapies for children with leukemia and solid tumors Cancer treatment involves far more than administering chemotherapy and surgically excising tumors It requires a multidisciplinary approach to patient management particularly in the treatment of solid tumors which pose the biggest challenge in cancer care today Surgery and radiotherapy as well as radiographic and pathologic assessments of response are critical factors in the treatment of children with cancer
