## **Pain And Suffering Selected Aspects:**

Interesting Patients from Forty-Five Years of Neurosurgical Practice - 1948-1993 Ben Crue,2010-12-07 A detailed and informative chronicle spanning over four decades of one man's research in the field of Neurosurgery and pain management

The Multidisciplinary Pain Center Jawahar N. Ghia,2012-12-06 The pain center clinic is in the stage of transition. It has come a long way since chronic pain was a nonexistent entity and patients with difficult pain problems did not receive well deserved attention or were lost in the busy practices of various specialty clinics. Thirty five years ahead of the rest of us John Bonica was the first physician who had a clear vision of a pain center's potential. Twenty years later in response to loud public demands for relief of chronic pain this idea was put into practice by a number of others on a somewhat larger scale. A team of specialists from various disciplines trained in the management of chronic pain now offer approaches ranging from simple outpatient care to inpatient hospitalization for comprehensive care including drug detoxification, behavior modification and total rehabilitation of these patients. Hospitals have entered this arena with renewed enthusiasm. The pain center clinic is now an established accepted and expanding method of providing care for chronic pain patients. The chapters in this book are based on examples of multidisciplinary projects that deal comprehensively with management of chronic pain. Aimed primarily at the pain center clinic in the university hospital setting this book ranges from historical perspectives to current pain centers with their less orthodox methods of relieving chronic pain to the future of algology as a specialty.

Management of Patients with Chronic Pain Steven F. Brena,Stanley L. Chapman,2012-12-06 This book has been written for the general health care professional from every medical and paramedical specialization. Because pain is the most common factor driving patients to seek professional advice it is likely that every physician, psychologist and therapist has been clinically exposed to the difficulty and the frequent frustration of dealing with people in pain. All of them may find in this book some explanations for their puzzles and some updated information which usually are published in specialized journals not ordinarily read by the general practitioner. Actually the book has been addressed to professionals at two different levels of general practice. At one level is the busy practitioner who treats most patients with acute pain and who may use this information in daily practice to prevent the onset of chronic pain. A common effort from all professionals currently is needed to curb the epidemic of chronic pain in the United States. At another level the book has been addressed to the practitioner who may have a more intense desire to become involved in the actual management of chronic pain patients.
