Paired Science Handbook Parental Involvement And Peer Tutoring In Science:

The Paired Science Handbook Keith J. Topping, 1998 Develop greater scientific ability motivation and confidence in children aged 5 to 11. This book is directed at teachers and those who train support and manage teachers. It is also directed at parents who can do Paired Science at home without any support from school if necessary although working in partnership is preferable.

Peer-assisted Learning Keith Topping, Stewart Ehly, 1998-07-01 Peer Assisted Learning PAL involves children in school consciously assisting others to learn and in so doing learning more effectively themselves. It encompasses peer tutoring, peer modeling, peer education, peer counseling, peer monitoring, and peer assessment which are differentiated from other more general cooperative learning methods. PAL is not diluted or surrogate teaching; it complements and supplements but never replaces professional teaching, capitalizing on the unique qualities and richness of peer interaction and helping students become empowered democratically to take more responsibility for their own learning. In this book PAL is presented as a set of dynamic, robust, effective and flexible approaches to teaching and learning which can be used in a range of different settings. The chapters provide descriptions of good practice blended with research findings on effectiveness. They describe procedures that can be applied to all areas of the school curriculum and can be used with learners of all levels of ability including gifted students, students with disabilities and second language learners. Among the distinguished contributors many are from North America while others are from Europe and Australia. The applicability of the methods they present is worldwide. Peer Assisted Learning is designed to be accessible and useful to teachers and to those who employ, train, support, consult with and evaluate them. Many chapters will be helpful to teachers aiming to replicate in their own school environments the cost effective procedures described. A practical resources guide is included. This volume will also be of interest to faculty and researchers in the fields of education and psychology, to community educators who want to learn about the implications of Peer Assisted Learning beyond school contexts and to employers and others involved in post school training.

Parental Involvement and Peer Tutoring in Mathematics and Science Keith J. Topping, Judi Bamford, 1998 This companion volume to The Paired Maths Handbook and The Paired Science Handbook provides a detailed background text to paired learning methods in maths and science. The book provides practical guidance on materials organisation and evaluation.

The Reading for Real Handbook Martin Coles, Colin Harrison, 2002-08-27 The Reading for Real Handbook was very well received by both teachers and literacy specialists when it was published in 1992. Since its first publication there have been significant changes in the field of reading, not least of which has been governmental demands for higher standards in reading and the resultant National Literacy Strategy NLS. As well as providing invaluable help for teachers struggling with the National Literacy Strategy and the Literacy Hour, several other new topics of interest are also addressed, including teaching fiction, non-fiction, inside and outside the Literacy Hour, integrating reading, writing and spelling work involving parents, assessment and working with slower readers.

Developments in Educational Psychology Kevin Wheldall, 2013-05-13

Review comment on the first edition Wheldall asks himself and his readers what has transpired within the field of educational psychology and what its relevance actually is for teaching, learning and education. As such it is a must read for all educational psychologists, students of educational psychology, teachers and teacher trainers. Professor Paul Kirschner, Open Universiteit British Journal of Educational Technology. What is the relevance of educational psychology in the twenty first century? In this collection of essays leading educational psychologists reflect on the seminal developments which have been made in the field over the past twenty five years or so and assess how far we have progressed. Given a broad and personal remit to address a range of issues the contributors review and critique a variety of topics including intelligence, communication, family environments, individual differences, reading, peer learning, classroom behaviour and higher education. Providing provocative and challenging insights into the state of contemporary educational psychology the contributors acknowledge throughout the successes and progression in the field but with a critical edge and a challenge being thrown down to psychologists of education to make study more seriously informed and as a consequence reformed. Now in its second edition this compelling text for students and researchers is thoroughly updated and includes four new chapters.
