Jason M. Newell,2017-09-26 Overwhelming empirical evidence indicates that new social workers particularly those going into child welfare or other trauma related care will discover emotional challenges including the indirect or secondary effects of the trauma work itself professional burnout and compassion fatigue However the newly revised CSWE Educational Policy and Accreditation Standards EPAS does not mandate the inclusion of content related to self care in social work curriculum or field education In a textbook that bridges the gap between theoretical and pragmatic approaches to this important issue in

human service work Jason M Newell provides a potential resolution by conceptualizing self care as an ongoing and holistic set of practice behaviors described as the key to professional resilience To address the effects of trauma related care on direct practitioners Newell provides a comprehensive competency based model for professional resilience examining four key constructs stress empathy resilience and self care from a range of theoretical dimensions For those who work with vulnerable populations the tendency to frame self care solely within organizational context overlooks the importance of self care in domains beyond the agency setting Alternatively he uses a framework grounded in the ecological systems perspective conceptualizing self care as a broader set of practice behaviors pertaining to the whole person including the physical interpersonal organizational familial and spiritual domains of the psychosocial self Alongside professional self care practices at the organizational level Newell makes a case for the pragmatic role of recreational activities time with family and friends physical health spirituality and mindfulness The application of a comprehensive approach to self care practice has potential to empower practitioners to remain resilient and committed to the values mission and spirit of the social work profession in the face of trauma

Stepped Care 2.0: A Paradigm Shift in Mental Health

Peter Cornish,2020-06-13 This book is a primer on Stepped Care 2 0 It is the first book in a series of three This primer addresses the increased demand for mental health care by supporting stakeholders help seekers providers and policy makers to collaborate in enhancing care outcomes through work that is both more meaningful and sustainable Our current mental health system is organized to offer highly intensive psychiatric and psychological care While undoubtedly effective demand far exceeds the supply for such specialized programming Many people seeking to improve their mental health do not need psychiatric medication or sophisticated psychotherapy A typical help seeker needs basic support For knee pain a nurse or physician might first recommend icing and resting the knee working to achieve a healthy weight and introducing low impact exercise before considering specialist care Unfortunately there is no parallel continuum of care for mental health and wellness As a result a person seeking the most basic support must line up and wait for the specialist along with those who may have very severe and or complex needs Why are there no lower intensity options One reason is fear and stigma A thorough assessment by a specialist is considered best practice After all what if we miss signs of suicide or potential harm to others A reasonable question on the surface however the premise is flawed First the risk of suicide or threat to others for those already seeking care is low Second our technical capacity to predict on these threats is virtually nil Finally assessment in our current culture of fear tends to focus more on the identification of deficits as opposed to functional capacities leading to over prescription of expensive remedies and lost opportunities for autonomy and self management Despite little evidence linking assessment to treatment outcomes and no evidence supporting our capacity to detect risk for harm we persist with lengthy intake assessments and automatic specialist referrals that delay care Before providers and policy makers can feel comfortable letting go of risk assessment however they need to understand the forces underlying the risk paradigm that
