Wellens, 1984 *Cardiac Energetics* R. Jacob, Hanjoerg Just, C. Holubarsch, 2013-04-17 Assessment of cardiac energetics at
the level of ATP synthesis chemomechanical energy transformation and whole organ dynamics as a function of
haemodynamic load ventricular configuration and oxygen and substrates supply is basic to understanding cardiac function
under physiological and pathophysiological hypertrophy hypoxia ischaemia and heart failure conditions Moreover cardiac
energetics should be an important consideration in the choice and application of drugs especially in the case of vasodilators
inotropic agents and in cardioprotective measures Only by considering energetics at the subcellular cellular and whole heart
level we can arrive at a better understanding of cardiac performance and ultimately better clinical judgement and drug
therapy Quantification of myocardial energetics will also help to determine the optimal time for surgical interventions such
as valvular replacement or aneurysm resection The present volume is the outcome of an international symposium on cardiac
energetics held in Gargellen Montafon Austria June 1986 The contributions will certainly help bridge the existing gap
between basic research involving isolated structures and that involving the whole organ on the one hand and render the
results derived from basic research applicable to clinical problems on the other hand *Clinical Cardiac Pacing* Kenneth A.
