Alternatives to Conventional Food Processing Andrew Proctor, 2018-01-17 Traditional thermal and freezing processing techniques have been effective in maintaining a safe high quality food supply. However increasing energy costs and the desire to purchase environmentally responsible products have been a stimulus for the development of alternative technologies. Furthermore some products can undergo quality loss at high temperatures or freezing which can be avoided by many alternative processing methods. This second edition of Alternatives to Conventional Food Processing provides a review of the current major technologies that reduce energy cost and reduce environmental impact while maintaining food safety and quality. New technologies have been added and relevant legal issues have been updated. Each major technology available to the food industry is discussed by leading international experts who outline the main principles and applications of each. The degree to which they are already in commercial use and developments needed to extend their use further are addressed. This updated reference will be of interest to academic and industrial scientists and engineers across disciplines in the global food industry and in research and to those needing information in greener or more sustainable technologies

Sustainable Food Processing and Engineering Challenges Charis M. Galanakis, 2021-03-16 Sustainability is becoming a major item for the food industry around the world as resources become more restricted and demand grows. Food processing ensures that the resources required for producing raw food materials and ingredients for food manufacturing are used most efficiently. Responding to the goals of sustainability requires the maximum utilization of all raw materials produced and integration of activities throughout all the production to consumption stages. To maximize the conversion of raw materials into consumer products food engineering and food processing challenges should be met. Sustainable Food Processing and Engineering Challenges covers the most trend topics and challenges of sustainable food processing and food engineering giving emphasis in engineering packaging for a sustainable food chain food processing technologies Industry 4.0 applied to food food digestion engineering sustainable alternative food processing technologies physico chemical aspects of food cold plasma technology refrigeration climate control non thermal pasteurisation and sterilization nanotechnology and alternative processes requiring less resources sustainable innovation in food product design etc. Edited by a multiple team of experts the book is aimed at food engineers who are seeking to improve efficiency of production systems and also researchers specialists chemical engineers and professionals working in food processing.
