Marine Zooplankton:

Ecology of Marine Zooplankton and Micronekton in Polar and Sub-Polar Areas Letterio Guglielmo, Alessandro Bergamasco, Guang Yang, Antonia Granata, 2024-11-01 The Polar and Subpolar region comprise one of the seven regions in the world from the Arctic to the Antarctic the Atlantic Pacific and Indian Oceans Marine biodiversity in the polar and subpolar regions is one of the richest on earth hosting important populations of crustaceans pelagic and benthic species that provide resources for the many seabirds and marine mammals that congregate there However these ecosystems as well as their biodiversity are vulnerable and already affected by the impacts of climate change and other threats The high climatic dynamics in those areas have already generated strong modifications to the environment with irreversible losses in biodiversity and diminished ecosystem services that are essential for the whole planet The current need to study and understand the biodiversity of the world's oceans makes polar and sub polar areas key regions for taxonomic and ecological studies

Atlas of Marine Zooplankton Straits of Magellan Letterio Guglielmo, Adrianna Ianora, 2012-12-06 The Antarctic represents the last of the world's still unexplored continents Since 1985 Italy has sent nine expeditions to this region making it one of the most scientifically active nations in the Antarctic Italy has built a permanent base there and has begun a systematic collection of data and samples which will contribute to our understanding of this peculiar and extremely fascinating continent Within this framework Italy has also conducted research in a sub Antarctic region of great scientific interest the Straits of Magellan This region with its characteristic oceanography and biota represents a transition point between the faunal assemblages of temperate and antarctic seas This atlas on the zooplankton is an important contribution to the study of the faunal assemblages of the region of the Straits and will hopefully be followed by others The initiative is part of a vast program launched by the Italian Ministry of Universities and Scientific and Technological Research to promote the exploration of Antarctic and sub Antarctic seas the aim of which is to preserve one of the Earth's largest and most undisturbed natural laboratories

Population Genomics: Marine Organisms Marjorie F. Oleksiak, Om P.

Rajora,2019-12-31 Population genomics has provided unprecedented opportunities to unravel the mysteries of marine organisms in the oceans depths The world s oceans which make up 70% of our planet encompass diverse habitats and host numerous unexplored populations and species Population genomics studies of marine organisms are rapidly emerging and have the potential to transform our understanding of marine populations species and ecosystems providing insights into how these organisms are evolving and how they respond to different stimuli and environments This knowledge is critical for understanding the fundamental aspects of marine life how marine organisms will respond to environmental changes and how we can better protect and preserve marine biodiversity and resources This book brings together leading experts in the field to address critical aspects of fundamental and applied research in marine species and share their research and insights crucial for understanding marine ecosystem diversity and function It also discusses the challenges opportunities and future perspectives of marine population genomics *Coastal Marine Zooplankton* C. Santhanam,Ajima Begum,Perumal Pachiappan,2018-07-23 The coastal and ocean ecosystem is a significant feature of our planet and provides a source of food for much of life on Earth Millions of species have been and are still being discovered in the world s oceans Among these zooplankton serve as secondary producers and are significant as they form pelagic food links and act as indicators of water masses They constitute the largest and most reliable source of protein for most of the ocean s fishes As such their absence or depletion often affects fishery In many countries the decline in fishery has been attributed to reduced plankton populations Furthermore trillions of tiny copepods produce countless faecal pellets contributing greatly to the marine snow and therefore accelerating the flow of nutrients and minerals from the surface waters to the seabed They are phylogenetically highly successful groups in terms of phylogenetic age number of living species and success of adaptive radiation A study of the basic and applied aspects of zooplankton would provide an index of the fishery potential and applications offering insights into ocean ecology to safeguard food supplies and livelihoods of the millions of people living in coastal areas For this reason we need to understand all the facets of zooplankton as well as their interactions with atmosphere and other life forms including human In this context this book discusses the basic and applied aspects of zooplankton especially taxonomy mosquitocidal activity culture analysis of nutritional pigments and enzyme profile preservation of copepods eggs bioenrichment of zooplankton and application of zooplankton in sustainable aquaculture
