### **Consequences of Maritime Critical Infrastructure Accidents**

Magdalena Bogalecka,2019-11-01 Consequences of Maritime Critical Infrastructures Accidents presents a probabilistic

general model of critical infrastructure accident consequences. This includes three models of the process of the events generated by a critical infrastructure accident: the process of environment threats and the process of environment degradation. This is all created and adopted to the maritime transport critical infrastructure with a focus on shipping networks applied to accident consequences modeling. *Consequences of Maritime Critical Infrastructures Accidents* is devoted to the assessment methods of consequences of environmental damages with application to ship accidents. It is a new approach that has never been proposed and applied before and includes methods of modeling identification, prediction and optimization to allow the reader to better understand the effects of these accidents on our oceans. Moreover the general procedures and the new strategy presented in the book aim to lower environment losses concerned with chemical releases caused by an accident of ship critical infrastructure network operating within the Baltic Sea or world sea waters. Provides a complete approach to accident consequences modeling identification, prediction and optimization. Presents the theoretical background which can be applied practically to maritime critical infrastructure accident consequences analysis. Includes a general model for critical infrastructure accident consequences which is globally applicable and with wide applications in various industrial sectors.
