Energy Security and Natural Gas Markets in Europe Tim Boersma, 2015-08-27 Moving beyond most conventional thinking about energy security in Europe which revolves around stability of supplies and the reliability of suppliers this book presents the history of European policy making regarding energy resources including recent controversies about shale gas and fracking Using the United States as a benchmark the author tests the hypothesis that EU energy security is at risk primarily because of a lack of market integration and cooperation between member states This lack of integration still prohibits natural gas to flow freely throughout the continent which makes parts of Europe vulnerable in case of supply disruptions The book demonstrates that the EU gas market has been developing at different speeds leaving the Northwest of the continent reasonably well integrated with sufficient trade and liquidity and different supplies whereas other parts are less developed In these parts of Europe there is a structural lack of investments in infrastructure interconnectors reverse flow options and storage facilities Thus even though substantial progress has been made in parts of the EU single source dependency often prevails leaving the relevant member states vulnerable to market power abuse Detailed comparisons are made of the situations in the Netherlands and Poland and of energy policy in the USA The book dismantles some of the existing assumptions about the concept of energy security and touches upon the level of rhetoric that features in most energy security and policy debates in Europe

Electricity Reform in Europe Jean-Michel Glachant, 2009-01-01 this volume comes across as one of the most profound sources on the specifics of European electricity market restructuring Competition and Regulation in Network Industries The SESSA study on the Internal Energy Market was an important and influential contribution towards the Commission's proposal for a third package of proposals intending to bring more effective competition and better security of supply to Europe's energy markets This volume based on the results of the study is an important and welcome contribution to the ongoing debate on these proposals Andris Piebalgs Commissioner for Energy at the European Commission The chapters in this book are written by the leading European scholars who have studied the structure behavior and performance of liberalised electricity markets in many European countries as well as in other regions of the world Both the analyses and the policy recommendations contained in this volume are well worth careful consideration by policymakers in Europe as well

as by policymakers in other countries that are seeking to adopt successful electricity sector liberalisation programs From the foreword by Paul L Joskow Massachusetts Institute of Technology US Dynamism or dissipation Competition or national champions Will enlargement promote or delay reform Energy economists contemplate the challenges posed by the restless and discontent European Commission Stephen Littlechild University of Birmingham and Judge Institute for Management Studies University of Cambridge UK The challenge of European electricity reform is being met although gradually delays notwithstanding This book provides precious help in spotting where the necessary further efforts should be directed In the US mistakes and delays have occurred no less than in Europe but an aggressive federal regulator absent in Europe is working to overcome them Electricity markets do not happen they have to be built Here are suggestions for a workable European market design No ideology just competence and wisdom from both theory and experience Will Europe learn Pippo Ranci Universit Cattolica del Sacro Cuore Italy The realisation of a European internal market for energy is still a work in progress Written by leading European scholars and discussed with major energy stakeholders this book presents a thorough analysis of the motives and methods needed to achieve a single European energy market The authors discuss the critical issues surrounding an internal European energy market including market design competition and market power sustainable energy versus the market regulation and harmonisation benchmarking and indicators modelling of competition market prices and energy forecasts They provide a multi disciplinary assessment of the best way to build the market base of a future European energy policy Electricity Reform in Europe will be of great interest to decision makers and managers in the energy industry or business sector as they will be able to see the whole European energy policy picture beyond their own corporate interests The book will also appeal to national and European energy administrations regulatory bodies and policy makers providing a synthesis of all relevant policy issues
