Materializing Architecture Emergent Materials For Innovative Buildings And Ecological Construction:

Material Architecture John Fernandez, 2006 Composed of a series of essays this book deals with the broad issues affecting the nature of architectural materials and provides a focused review of the state of the art materials It also provides designers with the tools they need to evaluate and select from the thousands of different materials that are available to them The book is organized into three sections Time looks at how the materials used in architectural design have changed over the years showing how we have come to use the materials we do in contemporary design Materials covers all five material families metals polymers ceramics composites and natural materials giving in depth information on their properties behavior origins and uses in design It also introduces a review of the cutting edge research for each family Systems outlines the technical design orientated research that uncovers how new architectural assemblies can be designed and engineered All of this practical advice is given along with many real case examples illustrating how this knowledge and information has been and can be used in architectural design

Structures and Architecture. A Viable Urban Perspective? Marie Frier Hvejsel, Paulo J.S. Cruz, 2022-07-08 Structures and Architecture A Viable Urban Perspective contains the research papers and prototype submissions 1448 pages presented at the Fifth International Conference on Structures and Architecture ICSA2022 Aalborg Denmark 6-8 July 2022 The contributions on creative and scientific aspects in the conception and construction of structures as architecture and on the role of advanced digital industrial and craft based technologies in this matter represent a critical blend of scientific technical and practical novelties in both fields Hence as part of the proceedings series Structures and Architecture the volume adds to a continuous exploration and development of the synergetic potentials of the fields of Structures and Architecture With each volume further challenging the conditions problems and potentials related to the art practice and theory of teaching researching designing and building structures as vehicles towards a viable architecture of the urban environment The volumes of the series appear once every three years in tandem with the conferences organized by the International Association of Structures and Architecture and are intended for a global readership of researchers practitioners and students including architects structural and construction engineers builders and building consultants constructors material suppliers planners urban designers anthropologists economists sociologists artists product manufacturers and other professionals involved in the design and realization of architectural structural and infrastructural projects

Ecological Urban Architecture Thomas Schröpfer, 2012-12-13 The goal of advancing eco cities often remains confined to political or technological issues This book establishes a focus on architectural and infrastructural design approaches to sustainable urban development Taking as a basis the critical assessment of the five prototypical eco cities of Vauban Freiburg solarCity Linz Valdespartera Sarriren Pamplona und Bo01 Malm the book identifies fields in which architectural and urban designers can use their creative skills and methods to achieve sustainable results on the urban scale The themes of Materialize Mobilize Simulate and Transform highlight the shift from the manipulation of quantitative

variables to interactive relationships effecting qualitative outcomes in design For example Materialize explores the potential of eco design beyond the traditional palette of materials to show how spatial boundaries can be re imagined as gradients of conditioned versus unconditioned space working with climatic conditions rather than material boundaries to help generate new forms of urban architecture

Building Better - Less - Different: Clean Energy Transition and Digital Transformation
Felix Heisel, Dirk E. Hebel, 2023-11-06

Sustainability Sustainability is to become the guiding principle of social action and economic activity At the same time its ways and means are far from clear As a holistic praxis sustainability must combine technical and material as well as social economic ecological and also ethical strategies which have multiple complex interactions and all too often also conflicting goals and priorities In no other field can these be better observed addressed and influenced than in architecture and building Building Better Less Different Each volume of Building Better Less Different details two fundamental areas of sustainability and explores their specific dynamics and interactions After introductory overviews innovative methods and current developments are described and analysed in in depth essays international case studies and pointed commentaries The sustainability criteria of efficiency better sufficiency less and consistency different form the framework for each book What the press say about the first volume Circular Construction and Circular Economy The articles case studies and commentaries in this book make a major contribution to advancing the current discourse on implementing circular based economic models in the building sector Hessian Chamber of Architects book reviews To think of tomorrow when building today is the core message that Dirk E Hebel and Felix Heisel want to convey to their readers And they also show us how with the help of relevant examples grouped under the headings better less and different they demonstrate concrete applications and argue that circular construction can also benefit the construction industry

architektur aktuell Clean energy transition It has long been common knowledge that energy and sustainability are closely interlinked And yet we are witnessing a profound shift in the sector While the earlier focus was on improving energy efficiency and increasing the proportion of renewable energy in buildings current energy conservation policies are supporting a broader more holistic view This encompasses integral approaches in which building design and construction measures form part of the energy concept from the outset as well as accounting for grey energy in building materials and a holistic evaluation of buildings over their entire life cycle For the energy intensive and emission producing building sector climate change presents an even greater challenge than conserving resources How can we contribute to a shift in heating strategies and employ new technologies to achieve climate neutral heating How can we respond to rising temperatures and the risk of increased energy consumption for cooling Can low tech concepts help to reduce the environmental impact of buildings over their life cycle Shouldn t we take greater account of the users of buildings and do we need completely different energy supply strategies

Digital Transformation At a time of natural ubiquity of digital tools widely adopted to streamline project delivery in architecture the foundations have been laid for a profound transformation of the construction industry to address the climate

crisis Digital architectural design and construction methods can be used as enabling technologies for a fundamental change towards a circular construction approach with significantly reduced ecological and climate impact This approach comprises a digital reinterpretation of natural building materials through digital construction technologies Digital deconstruction and reuse strategies can transform the existing building stock into resources for the future Mass customization of tailor made building components minimizes resource consumption Architects in their emerging role as interdisciplinary interface and digital master builders reunite design and making through digital craft Finally the book provides a glimpse into the potential future of construction which might be characterized by fundamentally different concepts of design and materialization of our built environment challenging current paradigms within our discipline
