Transport Properties and Concrete Quality Barzin Mobasher, Jan P. Skalny, 2006-12-22 This title is based on the workshop on Transport Properties Concrete Quality held at the campus of Arizona State University on October 10 12 2005 During this meeting scientific aspects of the relevant relationships between materials mechanisms processes and service life were discussed Provides a useful resource for understanding the most valuable aspects of cement based materials with topics ranging from the current state of practice to theory simulation and testing and specifications Logically organized and carefully selected articles give insight into the need to better integrate aspects of materials science mechanics modeling and testing in developing tools of understanding the durability in cement based materials

Materials Science of Concrete, Special Volume Jan P. Skalny, Juraj Gebauer, Ivan Odler, 2001-04-28 This volume provides broad coverage of key issues related to the role of calcium hydroxide in cements and concrete It contains critical topics such as the physicochemical role calcium hydroxide plays in hydration and deterioration of cementing properties as well as the implications of the presence of calcium hydroxide on the future of Portland cement blended and specialty cements and ecology of cement production

Materials Science of Concrete Andrew J. Boyd, Sidney Mindess, Jan P. Skalny, 2002-04-28 This workshop brought together representatives from different areas of the cement and concrete community to discuss future trends and challenges in the field of concrete materials Topics include developments and their potential for application industry s view on what it needs from academia academia s view on what it expects from industry and what they have to offer technical advances and barriers to advancement the role of governments business issues and ecological and societal barriers

Materials Science of Concrete Jan P. Skalny, *Materials Science of Concrete* Menashi Cohen, Sidney Mindess, Jan P. Skalny, 1998 This book is a collection of papers from the symposium honoring Professor Sidney Diamond of the School of Civil Engineering Purdue University one of the leading scholars in the field of concrete science The volume contains Chemical and physical aspects of mechanisms of hydration of cements development of concrete microstructure and mechanical properties and various aspect of mechanisms of concrete deterioration including alkali silica reaction ASR freezing thawing and corrosion of reinforcement Includes Dr Diamond s paper Concrete Porosity Revisited

Materials Science of Concrete Jacques Marchand, Jan P. Skalny, 1999 This volume contains ten invited presentations on the topic of sulfate attack caused by external sulfate sources

The discussions concentrate on chemical and physical mechanistic aspects of the applicable sulfate to paste reactions and on the interrelationships between the internal e.g. paste composition pore solution concrete matrix permeability and external e.g. composition of aggressive medium temperature and humidity curing practices variables

Materials Science In Construction: An Introduction Arshad Ahmed, John Sturges, 2014-11-20

Materials Science in Construction explains the science behind the properties and behaviour of construction's most fundamental materials: metals, cement and concrete, polymers, timber, bricks and blocks, glass and plaster. In particular, the critical factors affecting in situ materials are examined, such as deterioration and the behaviour and durability of materials under performance. An accessible, easy-to-follow approach makes this book ideal for all diploma and undergraduate students on construction-related courses taking a module in construction materials

Materials Science of Concrete R. Douglas Hooton, 2001

Materials Science of Concrete II P.K. Mehta, 1992

The first volume of the series on the Material Science of Concrete was published in 1989. This is the second volume and it contains ten chapters comprising state-of-the-art reviews on various subjects related to the materials science of cements and concrete

Concrete Science V. S. Ramachandran, R. F. Feldman, J. J. Beaudoin, 1982-04-14

Concrete, one of the oldest and most versatile of manufactured building materials, has been extensively researched in recent years. Existing books on the subject tend to be devoted to either the chemistry of cement or concrete technology. Concrete Science aims to bridge this gap, providing a handbook for concrete technologists, engineers, architects, and material scientists, as well as users and manufacturers of cement. For designers and students of material science, this publication should aid the use of these new materials, as well as encouraging further research in the field.

High-performance Construction Materials: Science And Applications Caijun Shi, Yi-lung Mo, 2008-06-11

This book describes a number of high-performance construction materials, including concrete, steel fiber-reinforced cement, fiber-reinforced plastics, polymeric materials, geosynthetics, masonry materials, and coatings. It discusses the scientific bases for the manufacture and use of these high-performance materials. Testing and application examples are also included. In particular, the application of relatively new high-performance construction materials to design practice is covered. Most books dealing with construction materials typically address traditional materials only, rather than high-performance materials, and as a consequence do not satisfy the increasing demands of today's society. On the other hand, books dealing with materials science are not engineering-oriented, with limited coverage of the application to engineering practice. This book is thus unique in reflecting the great advances made on high-performance construction materials in recent years. This book is appropriate for

use as a textbook for courses in engineering materials structural materials and civil engineering materials at the senior undergraduate and graduate levels It is also suitable for use by practice engineers including construction materials mechanical and civil engineers

Perspectives in Civil Engineering Jeffrey S. Russell, 2003-01-01 This report contains 27 papers that serve as a testament to the state of the art of civil engineering at the outset of the 21st century as well as to commemorate the ASCE's Sesquicentennial Written by the leading practitioners educators and researchers of civil engineering each of these peer reviewed papers explores a particular aspect of civil engineering knowledge and practice Each paper explores the development of a particular civil engineering specialty including milestones and future barriers constraints and opportunities The papers celebrate the history heritage and accomplishments of the profession in all facets of practice including construction facilities special structures engineering mechanics surveying and mapping irrigation and water quality forensics computing materials geotechnical engineering hydraulic engineering and transportation engineering While each paper is unique collectively they provide a snapshot of the profession while offering thoughtful predictions of likely developments in the years to come Together the papers illuminate the mounting complexity facing civil engineering stemming from rapid growth in scientific knowledge technological development and human populations especially in the last 50 years An overarching theme is the need for systems level approaches and consideration from undergraduate education through advanced engineering materials processes technologies and design methods and tools These papers speak to the need for civil engineers of all specialties to recognize and embrace the growing interconnectedness of the global infrastructure economy society and the need to work for more sustainable life cycle oriented solutions While embracing the past and the present the papers collected here clearly have an eye on the future needs of ASCE and the civil engineering profession
