Materials Reliability in Microelectronics IV Materials Research Society, 1994-01-01      *Materials Reliability in Microelectronics IV* Materials Research Society. Spring Meeting, 1994      Constrained Deformation of Materials Y.-L. Shen, 2010-08-09 Constrained Deformation of Materials Devices Heterogeneous Structures and Thermo Mechanical Modeling is an in depth look at the mechanical analyses and modeling of advanced small scale structures and heterogeneous material systems Mechanical deformations in thin films and miniaturized materials commonly found in microelectronic devices and packages MEMS nanostructures and composite and multi phase materials are heavily influenced by the external or internal physical confinement A continuum mechanics based approach is used together with discussions on micro mechanisms to treat the subject in a systematic manner under the unified theme Readers will find valuable information on the proper application of thermo mechanics in numerical modeling as well as in the interpretation and prediction of physical material behavior along with many case studies Additionally particular attention is paid to practical engineering relevance Thus real life reliability issues are discussed in detail to serve the needs of researchers and engineers alike      **Digital Technical Journal of Digital Equipment Corporation** ,1985      Applied Mechanics Reviews ,1994      **Dynamics in Small Confining Systems IV: Volume 543** J. M. Drake, 1999-07-15 This book the fourth in a series from the Materials Research Society follows the tradition of earlier volumes in the series and covers a broad range of topics relating to structure and dynamics under geometric restrictions Emphasis is on methods of probing confined systems diffusion in porous media polymers and membranes dielectric and mechanical relaxation in nanopores rheology and friction studies of embedded liquids and properties of dendrimer supermolecules Participants from many varied disciplines share their points of view on the fundamental questions of how spatial restrictions modify a system to behave significantly different than in bulk how this difference relates to the molecular properties and how it can be probed      Plastic Deformation of Ceramics R.C. Bradt, C.A. Brookes, J.L. Routbort, 2013-11-11 This proceedings volume Plastic Deformation of Ceramics constitutes the papers of an international symposium held at Snowbird Utah from August 7 12 1994 It was attended by nearly 100 scientists and engineers from more than a dozen countries representing academia national laboratories and industry Two previous conferences on this topic were held at The Pennsylvania State University in 1974 and 1983 Therefore the last major international conference focusing on the deformation of ceramic materials was held more than a decade ago Since the early 1980s ceramic materials have progressed through an evolutionary period of development and advancement They are now under consideration for applications in engineering structures The contents of the previous conferences indicate that considerable effort was directed towards a basic understanding of deformation processes in covalently bonded or simple oxide ceramics However now more than a decade later the focus has completely shifted In particular the drive for more efficient heat engines has resulted in the development of silicon based ceramics and composite ceramics The discovery of

high temperature cupric oxide based superconductors has created a plethora of interesting perovskite like structured ceramics Additionally nanophase ceramics ceramic thin films and various forms of toughened ceramics have potential applications and hence their deformation has been investigated Finally new and exciting areas of research have attracted interest since 1983 including fatigue nanoindentation techniques and superplasticity
