Practical Mathematics for AI and Deep Learning Tamoghna Ghosh,Shravan Kumar Belagal Math ,2022-12-30 Mathematical Codebook to Navigate Through the Fast changing AI Landscape **KEY FEATURES** Access to industry recognized AI methodology and deep learning mathematics with simple to understand examples Encompasses MDP Modeling the Bellman Equation Auto regressive Models BERT and Transformers Detailed line by line diagrams of algorithms and the mathematical computations they perform **DESCRIPTION** To construct a system that may be referred to as having Artificial Intelligence it is important to develop the capacity to design algorithms capable of performing data based automated decision making in conditions of uncertainty Now to accomplish this goal one needs to have an in depth understanding of the more sophisticated components of linear algebra vector calculus probability and statistics This book walks you through every mathematical algorithm as well as its architecture its operation and its design so that you can understand how any artificial intelligence system operates This book will teach you the common terminologies used in artificial intelligence such as models data parameters of models and dependent and independent variables The Bayesian linear regression the Gaussian mixture model the stochastic gradient descent and the backpropagation algorithms are explored with implementation beginning from scratch The vast majority of the sophisticated mathematics required for complicated AI computations such as autoregressive models cycle GANs and CNN optimization are explained and compared You will acquire knowledge that extends beyond mathematics while reading this book Specifically you will become familiar with numerous AI training methods various NLP tasks and the process of reducing the dimensionality of data **WHAT YOU WILL LEARN** Learn to think like a professional data scientist by picking the best performing AI algorithms Expand your mathematical horizons to include the most cutting edge AI methods Learn about Transformer Networks improving CNN performance dimensionality reduction and generative models Explore several neural network designs as a starting point for constructing your own NLP and Computer Vision architecture Create specialized loss functions and tailor made AI algorithms for a given business application **WHO THIS BOOK IS FOR** Everyone interested in artificial intelligence and its computational foundations including machine learning data science deep learning computer vision and natural language processing NLP both researchers and professionals will find this book to be an excellent companion This book can be useful as a quick reference for practitioners who already use a variety of mathematical topics but do not completely understand the underlying principles **TABLE OF CONTENTS** 1 Overview of AI 2 Linear Algebra 3 Vector Calculus 4 Basic Statistics and Probability

Theory 5 Statistics Inference and Applications 6 Neural Networks 7 Clustering 8 Dimensionality Reduction 9 Computer Vision 10 Sequence Learning Models 11 Natural Language Processing 12 Generative Models **Artificial Intelligence and Applied Mathematics in Engineering Problems** D. Jude Hemanth,Utku Kose,2020-01-03 This book features research presented at the 1st International Conference on Artificial Intelligence and Applied Mathematics in Engineering held on 20 22 April 2019 at Antalya Manavgat Turkey In today s world various engineering areas are essential components of technological innovations and effective real world solutions for a better future In this context the book focuses on problems in engineering and discusses research using artificial intelligence and applied mathematics Intended for scientists experts M Sc and Ph D students postdocs and anyone interested in the subjects covered the book can also be used as a reference resource for courses related to artificial intelligence and applied mathematics **Math and Architectures of Deep**

Learning Krishnendu Chaudhury,Ananya H. Ashok,Sujay Narumanchi,Devashish Shankar,2024-03-26 The mathematical paradigms that underlie deep learning typically start out as hard to read academic papers often leaving engineers in the dark about how their models actually function Math and Architectures of Deep Learning bridges the gap between theory and practice laying out the math of deep learning side by side with practical implementations in Python and PyTorch Written by deep learning expert Krishnendu Chaudhury you ll peer inside the black box to understand how your code is working and learn to comprehend cutting edge research you can turn into practical applications about the technology It s important to understand how your deep learning models work both so that you can maintain them efficiently and explain them to other stakeholders Learning mathematical foundations and neural network architecture can be challenging but the payoff is big You ll be free from blind reliance on pre packaged DL models and able to build customize and re architect for your specific needs And when things go wrong you ll be glad you can quickly identify and fix problems about the book Math and Architectures of Deep Learning sets out the foundations of DL in a way that s both useful and accessible to working practitioners Each chapter explores a new fundamental DL concept or architectural pattern explaining the underpinning mathematics and demonstrating how they work in practice with well annotated Python code You ll start with a primer of basic algebra calculus and statistics working your way up to state of the art DL paradigms taken from the latest research By the time you re done you ll have a combined theoretical insight and practical skills to identify and implement DL architecture for almost any real world challenge **Parallel Processing and Applied Mathematics** Roman Wyrzykowski,Ewa Deelman,Jack Dongarra,Konrad Karczewski,Jacek Kitowski,Kazimierz Wiatr,2016-04-05 This two volume set LNCS 9573 and 9574 constitutes the refereed proceedings of the 11th International Conference of Parallel Processing and Applied Mathematics PPAM 2015 held in Krakow Poland in September 2015 The 111 revised full papers presented in both volumes were carefully reviewed and selected from 196 submissions The focus of PPAM 2015 was on models algorithms and software toolswhich facilitate efficient and convenient utilization of modern parallel and distributed computing architectures as well as

on large scale applications including big data problems
