**Mathematics Learning in Early Childhood** National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early Childhood Mathematics, 2009-12-13 Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due in part to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners, those who work directly with children and their families in shaping the policies that affect the education of young children.

*The Publishers' Trade List Annual*, 1985      Math-a-draw Judith N. Parsons, 1984      **Community Participation with Schools in Developing Countries** Mikiko Nishimura, 2020-08-04 The Sustainable Development Goals (SDGs) 2016-2030 set by the United Nations in 2015 restated the importance of universal primary education for all and specifically discuss quality, equity, and inclusion in basic education. To achieve this, the role of community has been emphasized, and participation has become a buzzword in international development over the past several decades. Despite the growing attention to community participation in school management, previous literature has shown mixed results in terms of its actual practice and its impacts on quality, equity, and inclusion in education. This book deepens the contextual understanding of community in developing countries and its involvement in schools in general and its impact on quality.

equity and inclusion of school education in particular By presenting various case studies in Asia Africa Latin America and a post conflict state in Europe the book analyses commonalities and differences in the ways communities are involved and cast their impacts and challenges The book contributes knowledge on the ways in which community involvement could work in developing countries the detailed processes and factors that make community participation work in different dimensions and remaining challenges that scholars and practitioners still need to be concerned and mindful in the field This book will appeal to both researchers and practitioners who are concerned about the community participation approach for the SDGs
