Mathematics in Twentieth-Century Literature & Art Robert Tubbs,2021-04-27 The author of What Is a Number examines the relationship between mathematics and art and literature of the 20th century During the twentieth century many artists and writers turned to abstract mathematical ideas to help them realize their aesthetic ambitions Man Ray Marcel Duchamp and perhaps most famously Piet Mondrian used principles of mathematics in their work Was it coincidence or were these artists following their instincts which were ruled by mathematical underpinnings such as optimal solutions for filling a space If math exists within visual art can it be found within literary pursuits In short just what is the relationship between mathematics and the creative arts In this exploration of mathematical ideas in art and literature Robert Tubbs argues that the links are much stronger than previously imagined and exceed both coincidence and commonality of purpose Not only does he argue that mathematical ideas guided the aesthetic visions of many twentieth century artists and writers Tubbs further asserts that artists and writers used math in their creative processes even though they seemed to have no affinity for mathematical thinking In the end Tubbs makes the case that art can be better appreciated when the math that inspired it is better understood An insightful tour of the great masters of the last century and an argument that challenges long held paradigms this book will appeal to mathematicians humanists and artists as well as instructors teaching the connections among math literature and art Though the content of Tubbs s book is challenging it is also accessible and should interest many on both sides of the perceived divide between mathematics and the arts Choice
