The Best Writing on Mathematics 2013 Mircea Pitici, 2014-01-19 The year's finest writing on mathematics from around the world with a foreword by Nobel Prize winning physicist Roger Penrose. This annual anthology brings together the year's finest mathematics writing from around the world. Featuring promising new voices alongside some of the foremost names in the field. *The Best Writing on Mathematics 2013* makes available to a wide audience many articles not easily found anywhere else and you don't need to be a mathematician to enjoy them. These writings offer surprising insights into the nature, meaning, and practice of mathematics today. They delve into the history, philosophy, teaching, and everyday occurrences of math and take readers behind the scenes of today's hottest mathematical debates. Here Philip Davis offers a panoramic view of mathematics in contemporary society. Terence Tao discusses aspects of universal mathematical laws in complex systems. Ian Stewart explains how in mathematics everything arises out of nothing. Erin Maloney and Sian Beilock consider the mathematical anxiety experienced by many students and suggest effective remedies. Elie Ayache argues that exchange prices reached in open market transactions transcend the common notion of probability and much, much more. In addition to presenting the year's most memorable writings on mathematics, this must-have anthology includes a foreword by esteemed mathematical physicist Roger Penrose and an introduction by the editor Mircea Pitici. This book belongs on the shelf of anyone interested in where math has taken us and where it is headed.

Discrete Mathematics in the Schools Joseph G. Rosenstein, This book provides teachers of all levels with a great deal of valuable material to help them introduce discrete mathematics into their classrooms.

Guide to Math Materials Phyllis J. Perry, 1997-02-15 Now it's easy to locate the materials you need to implement the new NCTM math standards. Organized by such math topics as problem solving, estimation, number sense, and numeration and geometry and spatial relationships, this book shows users where to find manipulatives and materials such as attribute blocks, pattern blocks, clocks, scales, multilink cubes, and prisms, calculators, and sorting toys. It also lists specialized math books, computer software, and a host of other learning materials, e.g., activity cards, puzzles, posters, games, reproducibles. The author briefly describes each product, cites grade level when given, and explains possible applications. Products of exceptional quality and value are highlighted, and the addresses of publishers and suppliers are given. A real time saver. Grades K-4.

An Excursion in Diagrammatic Algebra J. Scott Carter, 2012 The aim of this book is to give as detailed a description as is possible of one of the most beautiful and complicated examples in low dimensional topology. This example is a gateway to a new idea of higher dimensional algebra in which diagrams replace algebraic expressions and relationships between diagrams represent

algebraic relations The reader may examine the changes in the illustrations in a leisurely fashion or with scrutiny the reader will become familiar and develop a facility for these diagrammatic computations The text describes the essential topological ideas through metaphors that are experienced in everyday life shadows the human form the intersections between walls and the creases in a shirt or a pair of trousers Mathematically informed reader will benefit from the informal introduction of ideas This volume will also appeal to scientifically literate individuals who appreciate mathematical beauty Hm Mathspace Instructional Video Series Richard N.
