## **Materials For Hightemperature Superconductor Technologies Hc 2002:**

**Materials for High-Temperature Superconductor Technologies: Volume 689** M. P. Panthanaman, 2002-04 Major advances in the years leading up to publication of this 2002 book in high temperature superconductor HTS research resulted in the increased use of HTS materials in commercial and precommercial applications. These materials have in common the complexity of their multicomponent chemistry. Consequently it is not surprising that many aspects of the interplay among microscopic structure, macroscopic properties and processing are still not fully understood. This book offers a comprehensive status review of high temperature superconductors from the near term commercialization of the first generation BSCCO tapes to the continuing advancement of the second generation YBCO coated conductors to the development of the new MgB<sub>2</sub> material. Fundamental material properties, studies, new growth methods, device and materials integration research and developments in designing and growing new materials all involving epitaxial superconducting thin films are featured.

**Journal of Research of the National Institute of Standards and Technology**, 2005 Ba(OH)<sub>2</sub> Equilibria in the System Ba-O-H-F, With Application to the Formation of Ba<sub>2</sub>YCu<sub>3</sub>O<sub>6.5+x</sub> From BaF<sub>2</sub>-Precursors, **Scientific and Technical Aerospace Reports**, 1992-06 Tsinghua Science and Technology, 2003 **Subject Guide to Books in Print**

, 1991 **Fabrication of Long-Length and Bulk High-Temperature Superconductors** Ruling Meng, 2004 This comprehensive volume is a good summary of the latest developments in high temperature superconductor HTS research and an excellent resource for researchers and managers working in this field. The book is divided into three chapters: coated conductors, BSCCO based conductors, MgB<sub>2</sub> and other HTS materials, and control of microstructure. Papers include topics such as long length flexible wires and tapes, melt textured YBCO materials, processing of HTS materials, the current status and potential for YBCO based coated conductors, BSCCO based conductors, and MgB<sub>2</sub> based wires. Proceedings of the symposium held at the 105th Annual Meeting of The American Ceramic Society April 27-30 in Nashville, Tennessee. Ceramic Transactions Volume 149

**Frontiers in Superconducting Materials** Vladimir Matias, 2004 Superconductors are entering a new age where they will be much more commonplace. High temperature superconductors HTS are currently in the marketplace for rf filter applications and are coming into power applications as wires for cables, fault current limiters and motors/generators. Critical to enabling these developments are the great advances over the last decade and a half in preparation of high quality materials. Equally exciting new superconductors are emerging and a better understanding of the cuprates is evolving. The three year old MgB<sub>2</sub> superconductor appears to be now moving on to the applications arena as well. This book offers a diverse collection of timely presentations on these new frontiers in superconducting materials. Topics include developments in second generation HTS wire known as coated conductors, progress in first generation HTS wire towards better performance and manufacturing, MgB<sub>2</sub> materials developments especially thin films and wires, rf applications and HTS thin films and electronics.
