Materials science institutions have always been crucial to the development of materials research. Even before materials science emerged as a discipline in the 20th century, these institutions existed in various forms. They provided specialized facilities for research, educated new generations of researchers, drafted policies, and funded programs, enabling valuable connections between research groups or played any other role which were needed to further the progress of materials science. This volume, the third in a series of volumes covering the development and history of materials science, presents illuminating perspectives on material science institutions. Twenty chapters are organized into six comprehensive parts, of which each cover a characteristic aspect or historical feature. True to the topic, they write about the contributors to this volume, who have varied backgrounds. Some are materials scientists and engineers, but others are historians, philosophers of science, sociologists, or even directors of institutions themselves. This comprehensive unified collection is a valuable resource for undergraduates, graduate students, academics, policymakers, and professionals who are actively interested in materials science and its development from the past to the future.

Midsize Facilities National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Solid State Sciences Committee, Committee on Smaller Facilities, 2006-03-06

Most of the instruments now used for materials research are too complex and expensive for individual investigators to own, operate, and maintain. Consequently, they have become increasingly consolidated into multi-user, small to mid-sized research facilities located at many sites around the country. The proliferation of these facilities, however, has drawn calls for a careful assessment of best principles for their operation. With support from the Department of Energy and the National Science Foundation, the NRC carried out a study to characterize and discuss ways to optimize investments in materials research facility infrastructure, with attention to midsize facilities. This report provides an assessment of the nature and importance of mid-sized facilities, their capabilities, challenges they face, current investment, and optimizing their effectiveness.
