Linking Practice with Scientifically-oriented Approaches Towards a Sustainable Future

Bond Graph

Methodology Wolfgang Borutzky, 2009-11-26 Nowadays engineering systems are of ever increasing complexity and must be considered as multidisciplinary systems composed of interacting subsystems or system components from different engineering disciplines. Thus an integration of various engineering disciplines e.g. mechanical, electrical and control engineering in a current design approach is required. With regard to the systematic development and analysis of system models interdisciplinary computer aided methodologies are coming more and more important. A graphical description formalism particularly suited for multidisciplinary systems are bond graphs devised by Professor Henry Paynter in as early as 1959 at the Massachusetts Institute of Technology MIT in Cambridge, Massachusetts USA and in use since then all over the world. This monograph is devoted exclusively to the bond graph methodology. It gives a comprehensive in depth state of the art presentation including recent results selected over research articles and dissertations and research contributions by the author to a number of topics. The book systematically covers the fundamentals of developing bond graphs and deriving mathematical models from them, the recent developments in methodology, symbolic and numerical processing of mathematical models derived from bond graphs. Additionally it discusses modern modelling languages, the paradigm of object oriented modelling, modern software that can be used for building and for processing of bond graph models and provides a chapter with small case studies illustrating various applications of the methodology.

Modeling and Simulation in the Context of Health Technology Assessment Issa J. Dahabreh, Tufts Evidence-based Practice Center, 2017

BACKGROUND Despite rigorous systematic reviews of efficacy and effectiveness of health care interventions, patients, providers and policymakers may remain in doubt about what they should do because of uncertainty, tradeoffs among benefits and harms and conflicting preferences. Modeling and simulation studies in health care can supplement systematic reviews to increase the usefulness of the evidence summary. The aims of this report are four fold: 1) to summarize evidence and consensus based guidance on the conduct and reporting of health care modeling and simulation; 2) to summarize guidance from Health Technology Assessment (HTA) groups for modeling; 3) to prioritize future research needs to improve models; and 4) to provide an overview of methods for model calibration and validation.

METHODS With guidance from a Technical Expert Panel and a Clinical and Policy Advisory team with clinical methodological research and policymaking expertise, we completed the following projects: For Aim 1, we conducted a systematic review of articles that provided evidence or consensus based recommendations for the conduct and reporting of health care modeling and simulation studies. We classified recommendation statements into four domains: model structure, data consistency and communication of model results. To contextualize the findings of the systematic review, we organized a meeting with a group of 28 stakeholders including modelers, users of models and funders of research. For Aim 2, we searched the web sites of 126 international agencies and institutes conducting HTA for real world practices regarding when to apply modeling and simulation methods, which we summarized. For Aim 3, from the systematic review and from the stakeholders in Aim 1, we identified and collected suggestions for future research needs. Stakeholders prioritized those needs.

based on importance desirability of new research feasibility and potential impact For Aim 4 we searched for articles that compared or applied alternative validation methods for modeling and simulation We extracted and summarized descriptions and comparisons of any methods and reported results for face validity internal validity external validity cross model validation and calibration RESULTS The systematic review of modeling recommendations Aim 1 found 71 eligible articles 90 percent of articles n 64 provided recommendations regarding model structure Almost all articles n 68 96% also provided recommendations regarding obtaining appropriate data to populate models Stakeholders highlighted the importance of establishing guiding principles for good practice but discouraged the use of cookbook checklists Of the 71 articles 38 54% provided suggestions for future research stakeholders provided 28 additional suggestions We found 21 HTA organizations provided guidance Aim 2 through their web sites regarding the application of modeling and simulation in the context of conducting a HTA The HTA organizations varied widely in what areas of modeling they provided guidance for and what specific recommendations they made In general HTA organizations favored incorporating models into HTA provided recommendations on how to model data and structure and recommended inclusion of costs in cost effectiveness models Future research needs that were prioritized Aim 3 included questions about model data model structure consistency and reporting Studies comparing validation methods Aim 4 provided information on model validation face validity and internal external and cross model validation and calibration varying specifications of the calibration problem with the same and different algorithms and use of alternative algorithms for the same calibration problem CONCLUSION Our systematic review and stakeholder meeting summary provides a comprehensive compendium of guidance documents for modeling and simulation studies annotated with information on the domains covered by each document and the methods used to arrive at specific recommendations We also summarized modeling recommendations for HTA organizations These processes enabled us to prioritize future research needs to form an empirical basis for and to improve recommendations for modeling Our overview of model validation and calibration provides insights into the relative value and efficiency of different methods
