Molecules and Models Arne Haaland, 2008-03-06 This book provides a systematic description of the molecular structures and bonding in simple compounds of the main group elements with particular emphasis on bond distances bond energies and coordination geometries The description includes the structures of hydrogen halogen and methyl derivatives of the elements in each group some of these molecules are ionic some polar covalent The survey of molecules whose structures conform to well established trends is followed by representative examples of molecules that do not conform We also describe electron donor acceptor and hydrogen bonded complexes Chemists use models to systematize our knowledge to memorize information and to predict the structures of compounds that have not yet been studied The book provides a lucid discussion of a number of models such as the Lewis electron pair bond and the VSEPR models the spherical and polarizable ion models and molecular orbital calculations and it outlines the successes and failures of each

*Modelling of Molecular Structures and Properties* Société française de chimie. Division de chimie physique. International Meeting, Société française de chimie, 1990 The constant progress in computing techniques and supercomputers is now enhanced by very rapid advances in molecular graphics which gives a fresh impetus to molecular modelling The regular and fast expansion of knowledge is manifest in both applied and theoretical fields and in all aspects of chemistry These proceedings present a complete assessment of the most recent advances in modelling of molecular structures and properties and supplies a rich sampling of the present resources of molecular modelling in practically all domains of chemistry and biophysics A large number of reviews by eminent specialists are included complete with a wealth of fresh results stemming from advances in molecular graphics and computational techniques A number of surveys deal with the main biophysical improvements or breakthroughs e g molecular dynamics as applied to biomolecular properties modelling simulation of protein structures and properties and

protein DNA interactions      **Modelling of Molecular Structures and Properties. Proceedings of the International Meeting of Physical Chemistry on Modeling of Molecular Structures and Properties in Physical Chemistry and Biophysics Organized by the Division de Chimie Physique of the Societe Francaise de Chimie Held in Nancy, France on 11-15 September 1989** ,1990 The improved techniques of molecular graphics have triggered very fast advances in molecular modelling be it concerned with structures or behaviour Jean Louis Rivail s proposal to devote our international meeting to molecular modelling was therefore approved practically without discussion The way our conference went it had been a good choice Crystal structures compelled very lengthy work whereas nowadays one must select because of its interest a structure which will be determined very quickly Conversely the field of chemical computation is still shared between some research on molecular reactivity that involve laborious number crunching while the field of molecular modelling offers many subtle examples of software which can visualize simply enough the structures and behaviours of complex molecules

of electronic structure The use of Free Energy calculations for the elucidation of reaction mechanisms in enzymatic systems is also discussed Subsequent sections focus on drug design and the use of database methods to determine ADME absorption distribution metabolism excretion properties This book provides a complete reference on state of the art computational chemistry practised on biological systems It is ideal for researchers in the field of computational chemistry interested in its application to biological systems

*Fundamental Principles of Molecular Modeling* Anton Amann, Jan C.A. Boeyens, W. Gans, 2013-06-29 Molecular similarity has always been an important conceptual tool of chemists yet systematic approaches to molecular similarity problems have only recently been recognized as a major contributor to our understanding of molecular properties Advanced approaches to molecular similarity analysis have their foundation in quantum similarity measures and are important direct or indirect contributors to some of the predictive theoretical computational and also experimental methods of modern chemistry This volume provides a survey of the foundations and the contemporary mathematical and computational methodologies of molecular similarity approaches where special emphasis is given to applications of similarity studies to a range of practical and industrially significant fields such as pharmaceutical drug design The authors of individual chapters are leading experts in various sub fields of molecular similarity analysis and the related fundamental theoretical chemistry topics as well as the relevant computational and experimental methodologies Whereas in each chapter the emphasis is placed on a different area nevertheless the overall coverage and the wide scope of the book provides the reader with a general yet sufficiently detailed description that may serve as a good starting point for new studies and applications of molecular similarity approaches The editors of this volume are grateful to the authors for their contributions and hope that the readers will find this book a useful and motivating source of information in the rapidly growing field of molecular similarity analysis

**Chemical & Metallurgical Engineering**, 1920      **Modeling Molecular Structures with Intrinsic Diffusion Models** Gabriele Corso, 2023 Since its foundations more than one hundred years ago the field of structural biology has strived to understand and analyze the properties of molecules and their interactions by studying the structure that they take in 3D space However a fundamental challenge with this approach has been the dynamic nature of these particles which forces us to model not a single but a whole distribution of structures for every molecular system This thesis proposes Intrinsic Diffusion Modeling a novel approach to this problem based on combining diffusion generative models with scientific knowledge about the flexibility of biological complexes The knowledge of these degrees of freedom is translated into the definition of a manifold over which the diffusion process is defined This manifold significantly reduces the dimensionality and increases the smoothness of the generation space allowing for significantly faster and more accurate generative processes We demonstrate the effectiveness of this approach on two fundamental tasks at the basis of computational chemistry and biology molecular conformer generation and molecular docking In both tasks we construct the first deep learning method to outperform traditional computational approaches achieving an unprecedented level of accuracy for scalable programs
